UNI-2 ELECTRONIC CALCULATOR-INDICATOR DEVICE

For measuring systems of liquids other than water

Issue	Date	Nature of modifications	Written by	Approved by
A	2020/01/27	Creation *[PJV158]*	DSM	SH

CONTENTS

1 PRESENTATION

1.1 General presentation

The ALMA UNI-2 electronic calculator-indicator is intended to be used as a part of measuring systems for measurement of liquids other than water. Used alone it's a non-interruptible calculator belonging to accuracy classes 0.5 or 1. Associated to the MPLS device, it's an interruptible calculator. It can be associated to other devices.

It can be integrated into autonomous measuring systems, into measuring system mounted on tank trucks or installed on a stationary loading terminal.

It can be installed directly on an ALMA ADRIANE turbine measuring device or in an independent case. Then it is connected with a cable to an ALMA pulse emitter such as 2B00, 2H00 or 2HP0.

Associated to a pulse emitter and a kit VAF, the whole is a dye meter.

Units and scale intervals of volume and flowrate are set in METROLOGICAL MODE. The volume displayed by the UNI-2 depends on the METROLOGICAL configuration. On the right side of the display screen, the pictogram 'Vm' indicates a volume at temperature whereas the pictogram 'V15', 'V20' or 'Vb' indicates a volume converted to the reference temperature (15°C, 20°C...).

The UNI-2 can:

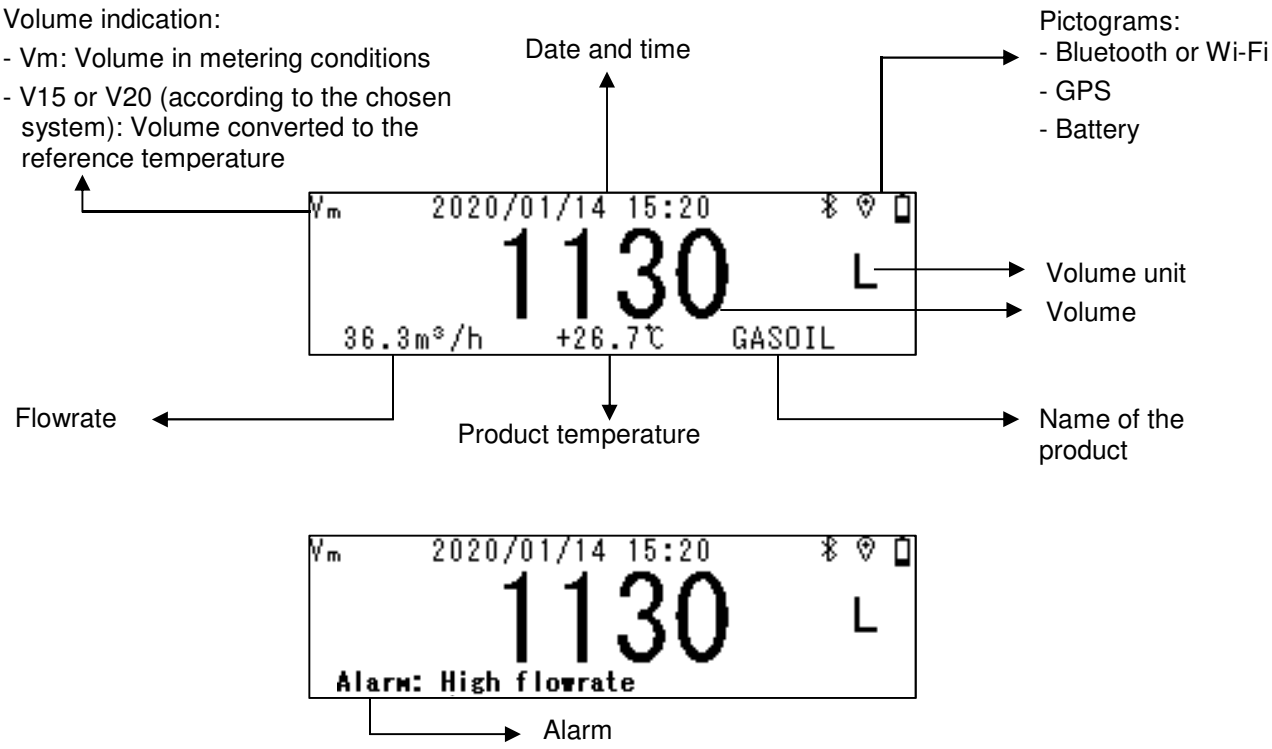
- Manage measuring operations. According to the flow direction, a measuring operation can be a delivery or a loading (non-guaranteed volumes). The UNI-2 sums the volumes in separate totalizers.
- Manage faults
- Measure quantities of products
- Communicate with an embedded computer or with a PC/tablet/portable device thanks to the wireless connection
- When it is associated to an MPLS device:
  - Control the process associated to the measuring system
  - Preset the volume
  - Command the pouring to stop when there is a significant failure

The optional functions are available:

- A wireless digital connection can be used to communicate with a CTD+ device. The measuring results and parameters are transferred to a PC through USB cable. Warning: The CTD+ is not an ATEX device, it must be used outside potentially explosive area
- The UNI-2 can be associated to a 3-wires Pt100 temperature sensor (example CT1001). In that case, it shows volume in metering conditions or volume converted to the reference temperature;
- The UNI-2 can be associated to one or two ALMA gas detectors type Honneywell LLE105000 or DLA01
- The UNI-2 can be associated to a printer for delivery ticket printing

1.2 Description

The UNI-2 has one display:



Meaning of the pictograms displayed in the upper right of the screen:

Bluetooth			Wi-Fi			GPS			Batterie	
	blinking	steady		blinking	with signal strength					10 charge level
OFF	ON	Connected	OFF	Disconnected	Connected	OFF	ON without position	ON position OK	Charging	Battery is full charged

NOTE 1: Bluetooth and Wi-Fi connections are exclusives.

NOTE 2: To save the battery charge, if the Bluetooth or Wi-Fi connection is released if it's not successful within two minutes. If the Bluetooth or Wi-Fi connection is successful, it remains active for 10 minutes.

The UNI-2 has five keys:

		Lights the display during 10 seconds
	MODIF	Normal mode: back to previous quantity Metrological mode: increment the flashing figure when imputing a value or return to previous menu
	SELECT	Normal mode, metering off: select the menu Normal mode, metering on: display the values (immediate flow, temperature) Metrological mode: select the figure to be modified or select the menu
	VALID	Normal mode: validate the selected menu or value Metrological mode: validate the displayed value or the selected menu In case of default: acknowledge the default
	RESET	The key is active when the UNI-2 is autonomous. Reset the volume to zero and record the data of the last measurement

1.3 Metrological features

The UNI-2 performs the functions that follows:

- It ensures the acquisition and processing of the pulses from different transductors.
- It calculates and displays volume or weight in metering conditions corrected by the application with a correction factor determined during the calibration of the measuring system.
- In some cases, this volume in metering conditions can be corrected depending on the flowrate and/or the type of liquid measured.
- If required, it calculates and displays volume converted to base conditions. Volume is calculated by taking into account the mean temperature of the liquid during metering. Using a standard conversion formula, the conversion factor can be calculated according to density in base conditions. Density is set manually prior to metering.
- If required, it calculates and displays the mean temperature of the liquid when it is measured by a Pt100 temperature sensor.
- The indicating device is reset to zero manually or automatically.
- It memorizes and secures measurement information, which can be read from its user interface.
- If the measuring system is interruptible, optionally the volume or weight to be delivered can be preset.
- It registers accumulated weight or volumes in metering conditions, and if required, the accumulated volumes in base conditions.
- The automatic update processing of the date and time in case of clock loss.

The UNI-2 has two operation levels: the USER mode for operating: measurement, visualization, maintenance and the METROLOGICAL mode for the configuration of the device by authorized personnel.

2 OPERATING RECOMMENDATIONS

⇨ The operating temperature of the UNI-2 is between -20°C and +50°C.
⇨ When it is not used, it's better to close the UNI-2 cover.
⇨ The front face glass must be regularly cleaned for easy readability and better communication with the CTD+.

⇨ **Charge batteries outside potentially explosive area**
⇨ **Replace batteries outside potentially explosive area**
⇨ **Use the CTD+ outside potentially explosive area**

3 CONNECTED FEATURES AND SUPPLY OF THE UNI-2

	Autonomous equipment				Stationary equipment	
	Charging	Between 100% and 40%	Between 40% and 10%	Less than 10%	Battery switch open	Battery switch close
Metering	On *	On	On	Off	On	On
Wi-Fi	On	On	Off	Off	Off	On
Bluetooth	On	On	On	Off	Off	On
GPS	On	On	On	Off	Off	On

* Charge batteries outside potentially explosive area

3.1 Connected functions

For stationary equipment, connectivity cannot be used if the battery-switch is open.

The wireless connection enables the UNI-2 to communicate with an embedded computer or with a PC/tablet/portable device

The connected functions of the UNI-2 are:

- Incoming data flow processing
- Recovery of parameters
- Recovery of maintenance information
- Geo-tracking of each measurement, the instantaneous position of the UNI-2
- Recovery of the clock

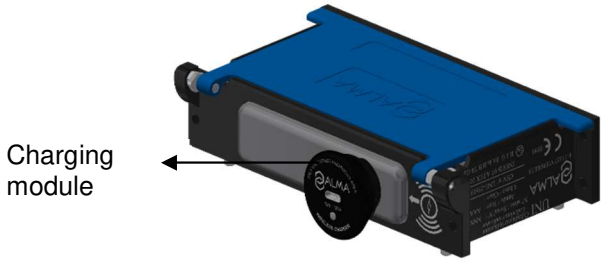
Communication modules are listed below:

- Bluetooth Low Energy 4.1 or Wi-Fi (IEEE 802.11 b/g/n (2.4GHz)
  They are used for outsourcing of measurement data and parameters of the UNI-2 for the customer. The customer uses a local interface that can be one of his tools or a tool supplied by ALMA. These features are exclusive.
- GPS

3.2 Power supply

The UNI-2 is powered by two rechargeable batteries. These internal batteries have a five years lifetime. The UNI-2 operates with or without its charging module It has at least one week battery life

For mobile equipment, use the charging module with a USB cable to charge the batteries.



For the stationary equipment installed on vehicles, use an external cable and the vehicle power supply to charge the batteries.

To save battery life:

- The Bluetooth or Wi-Fi connection are activated manually in the menu Interfaces of the USER mode.
- The standby mode is automatic after a period of inactivity.
- The GPS switches on automatically during measurements only

To set date and time, you can switch on the GPS manually to synchronize the clock again. This operation lasts one minute and must be done outdoors. Stop GPS at the end of synchronization (menu Connect>Start GPS).

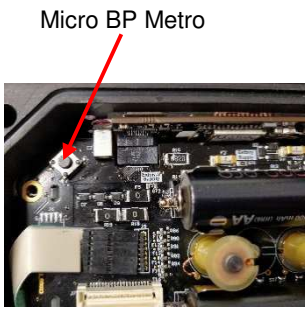
4 CONFIGURATION, SETTINGS AND CALIBRATION

4.1 Configure the UNI-2

You must configure the UNI-2 during commissioning and sometimes during metrological controls. Break the seals protecting the opening of the case, remove the four screws and press the micro BP Metro. See below.

Then you enter the METROLOGICAL mode. Details are available in the section CONFIGURE THE UNI-2: METROLOGICAL MODE.

NOTE: Only approved persons are permitted to remove the seal.



4.2 Set the UNI-2

You must set the UNI-2 before any operation. Then choose:

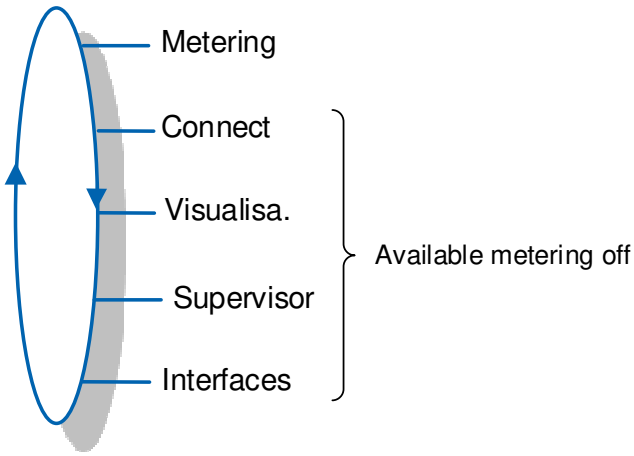
- Menu User>Connect to enable the possible external connections
- Menu User>Interfaces to set the active connections

4.3 Calibrate the UNI-2

To calibrate the UNI-2, choose the menu User>Supervisor>Calibration. To modify the coefficient, remove the seal to switch in METROLOGICAL mode.

NOTE: Only approved persons are permitted to remove the seal.

5 USE THE UNI-2: USER MODE

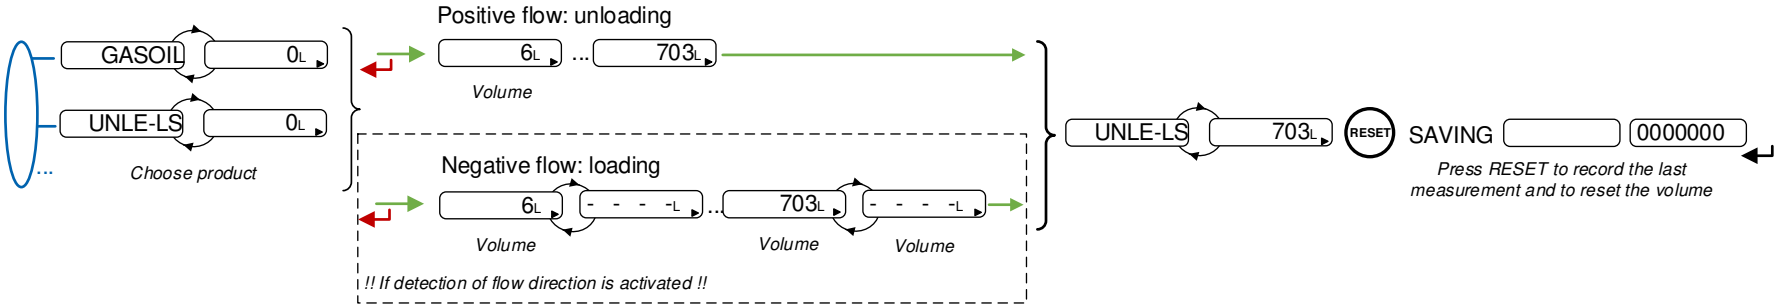


The displayed volume depends on the configuration set in METROLOGICAL mode. A pictogram at the upper left of screen, indicates Vm for volume at temperature, or V15/V20/Vb for a volume converted to the reference temperature.

5.1 Menu Metering

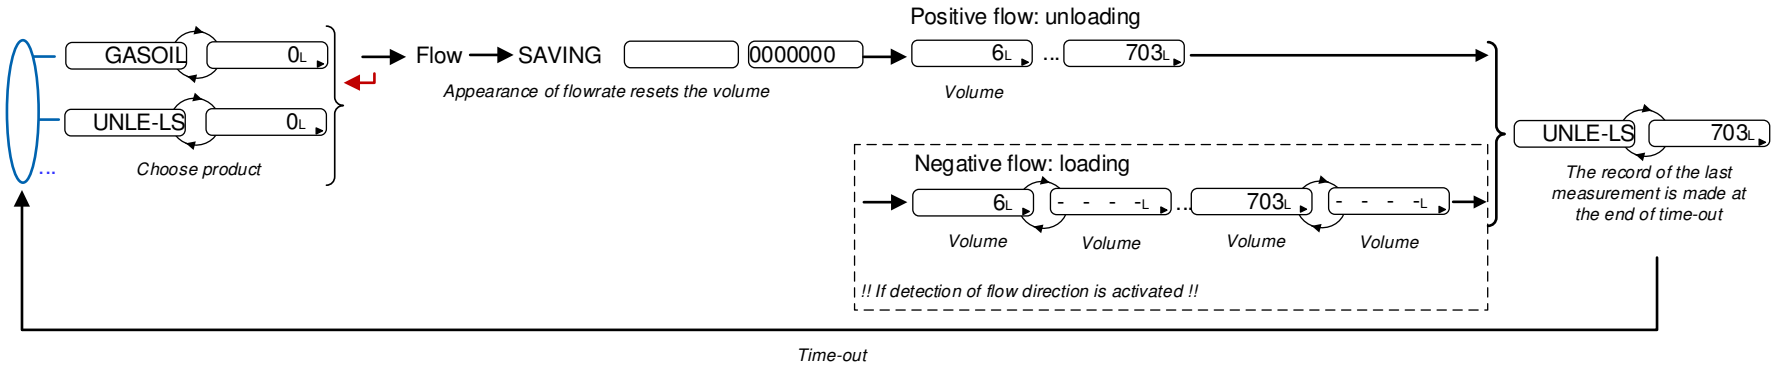
5.1.1 Measurement with UNI-2

The manual recording sequence starts at the end of measurement by pressing RESET. The last measurement data is then recorded and the volume is reset.



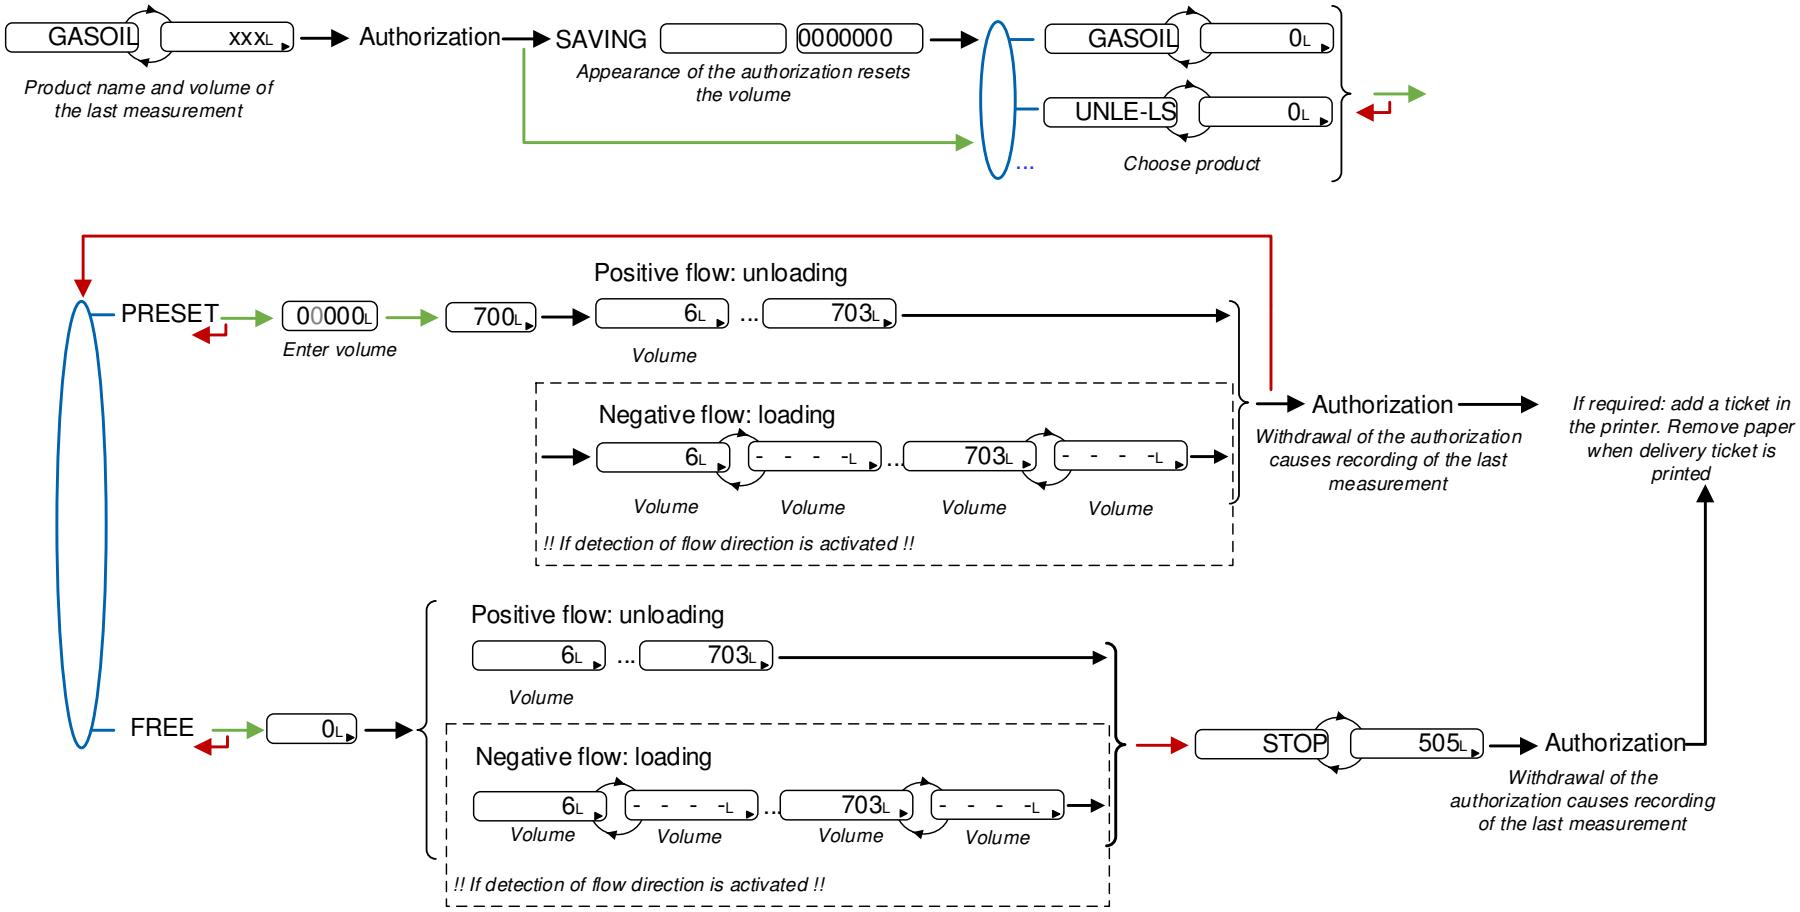
For the automatic recording sequence, the time-out is set in METROLOGICAL mode (menu Auto Save)

At the beginning of measurement, appearance of flowrate resets the volume. The last measurement data is automatically recorded at the end of measurement, at zero flow and when the time-out is up.



5.1.2 Measurement with UNI-2 AND MPLS

The UNI-2 MPLS operates with an external authorization (switch or other device). Appearance of the authorization resets the volume. Withdrawal of the authorization causes the end of measurement and the recording of the last measurement data. If required, to print the delivery ticket, you can add paper into the printer during pouring or at withdrawal of the authorization.



5.1.3 Data recording and volume reset

UNI-2

- Manual recording sequence: volume reset and recording of the last measurement data are triggered by pressing RESET at zero flow conditions
- Automatic recording sequence: the appearance of flowrate resets the volume to zero. The last measurement data are recorded when the time-out is up.

UNI-2 MPLS

Appearance of the authorization resets the volume. Withdrawal of the authorization at zero flow conditions causes the recording of the last measurement data.

5.1.4 Transfer measurement results and parameters

5.1.4.1 Transfer with the INSIDE app

The INSIDE app is used to transfer measurement results and parameters. See the user manual MU 7094

5.1.4.2 Transfer with CTD+

The CTD+ is not ATEX, this operation must be done outside potentially explosive area.

When flow rate is zero, you can transfer to the key the parameters and the measurement results of the N last days. Set N in the menu User>Interfaces>CTD+

See the user guide GU 7110

The file can be downloaded to a PC at '.csv' format.

NOTE: Do not plug the USB cable during data transfer.

5.1.5 Printing of a delivery ticket

5.1.5.1 Printing with the INSIDE app

Use the INSIDE app to print the delivery ticket. This feature is used to print delivery ticket as a PDF file. See the user manual MU 7094

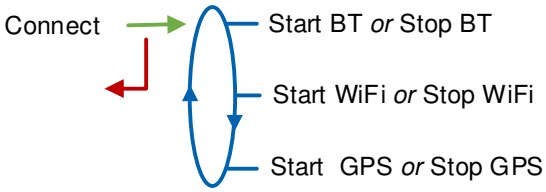
5.1.5.2 Printing with the CTD+ and the mobile printer kit

Use the CTD+ and the non ATEX mobile printer kit to print the delivery ticket. See the user manual MU 7087.

5.1.5.3 Printing with MPLS

If a printer is connected to the MPLS, simply add paper into the printer during pouring or at withdrawal of the authorization. Then the delivery ticket is printed when authorization is removed. You can print the ticket until next reset of the volume. Remove the ticket from the printer when printing is finished (example of a delivery ticket in ANNEX)

5.2 Menu Connect

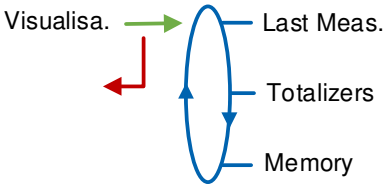


Start BT: Start or stop Bluetooth connection. The Bluetooth switches automatically to stand-by mode after two minutes of inactivity when connection is off and after ten minutes of inactivity when connection is on

Start Wi-Fi: Start or stop Wi-Fi connection

Start GPS: This menu is used to switch on the GPS manually to synchronize the clock again. This operation lasts one minute and must be done outdoors. Stop GPS at the end of synchronization.

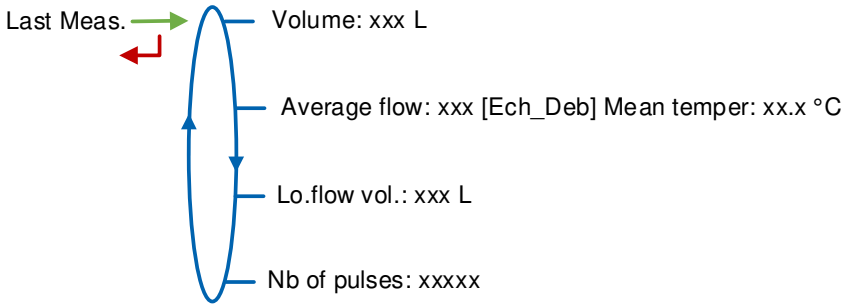
5.3 Menu Visualisa.



If the values are preceded by this display '-------'; it means they are no longer guaranteed.

5.3.1 Sub-menu Last Meas.

This menu displays the information of the last measurement. Information displayed depends on the UNI-2 configuration.



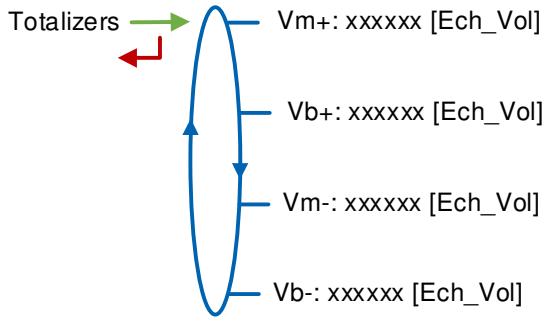
Volume: Measured volume

Average flow; Mean temper: Average flow of the measurement; mean temperature of the measurement

Lo.flow vol.: Volume measured under minimal flow rate during measurement

Nb of pulses: Number of pulses of the meter

5.3.2 Sub-menu Totalizers



Vm+: Totalizer of volume in metering conditions

Vb+: Totalizer of volume converted to base conditions if the temperature option is activated

Vm-: Totalizer of volume in metering conditions for loadings, if flow direction is on

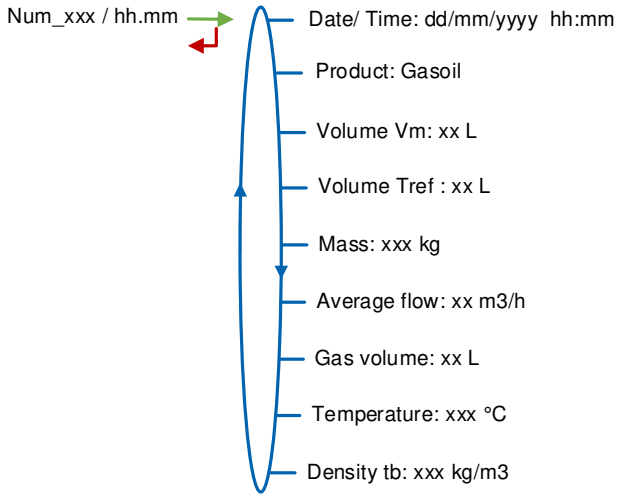
Vb-: Totalizer of volume converted to base conditions with temperature option, if the UNI is configured to detect flow direction

5.3.3 Sub-menu Memory

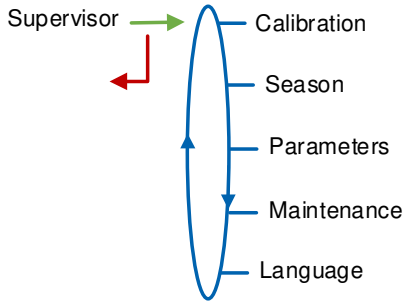
Enter or validate the date and the measurement number to access the relevant data.

Information displayed depends on the UNI-2 configuration. Temperature, converted volume, and mass are displayed if the temperature option is activated.

The measured Gas volume is displayed for information only. It has no metrological value.



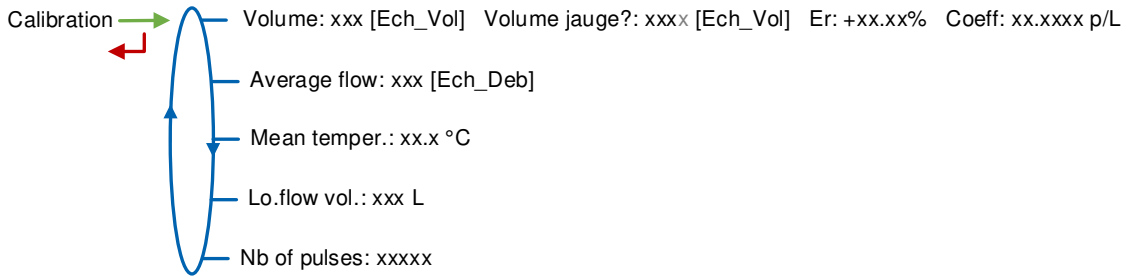
5.4 Menu Supervisor



5.4.1 Sub-menu Calibration

Measure the accuracy of the measuring system during the calibration. It is available after a measurement. With UNI-2 MPLS, remove the authorization.

NOTE: Only approved persons are permitted to remove the seal.



Volume: Display the volume; **Gauge volume**: Enter the volume read on the calibration mean; **Er**: Display the error in %; **Coeff**: Coefficient to be set only by an authorized person in METROLOGICAL mode, if required

Average flow: Average flow of the measurement

Mean temper: Mean temperature of the measurement

Lo.flow vol.: Volume measured under minimal flow rate during measurement

Nb of pulses: Number of pulses of the meter

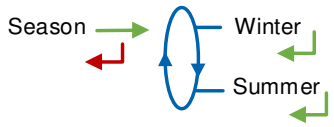
5.4.2 Sub-menu Season

This menu depends on the metrological configuration.

- Metrological configuration: Date time>Time>Season→No season

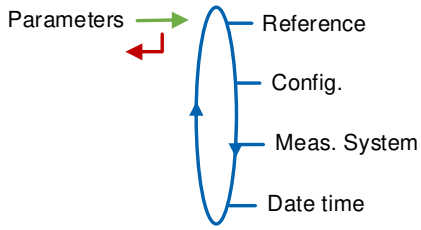
- Metrological configuration: Date time>Time>Season→Summer or Date time>Time>Season→Winter

  This menu is used to change from summer to winter time (and back again).

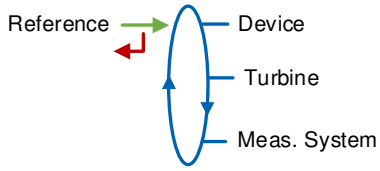


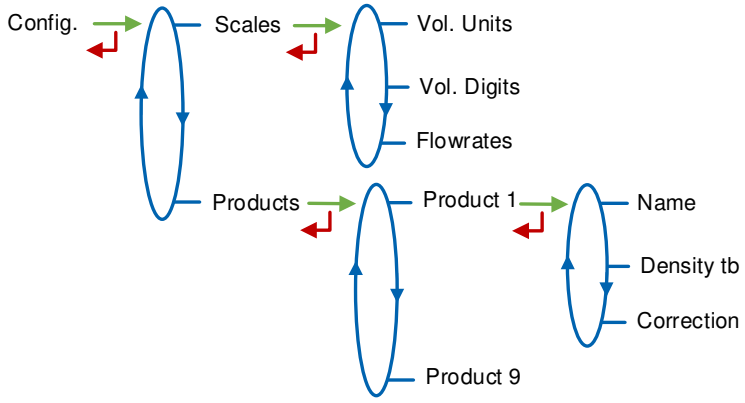
5.4.3 Sub-menu Parameters

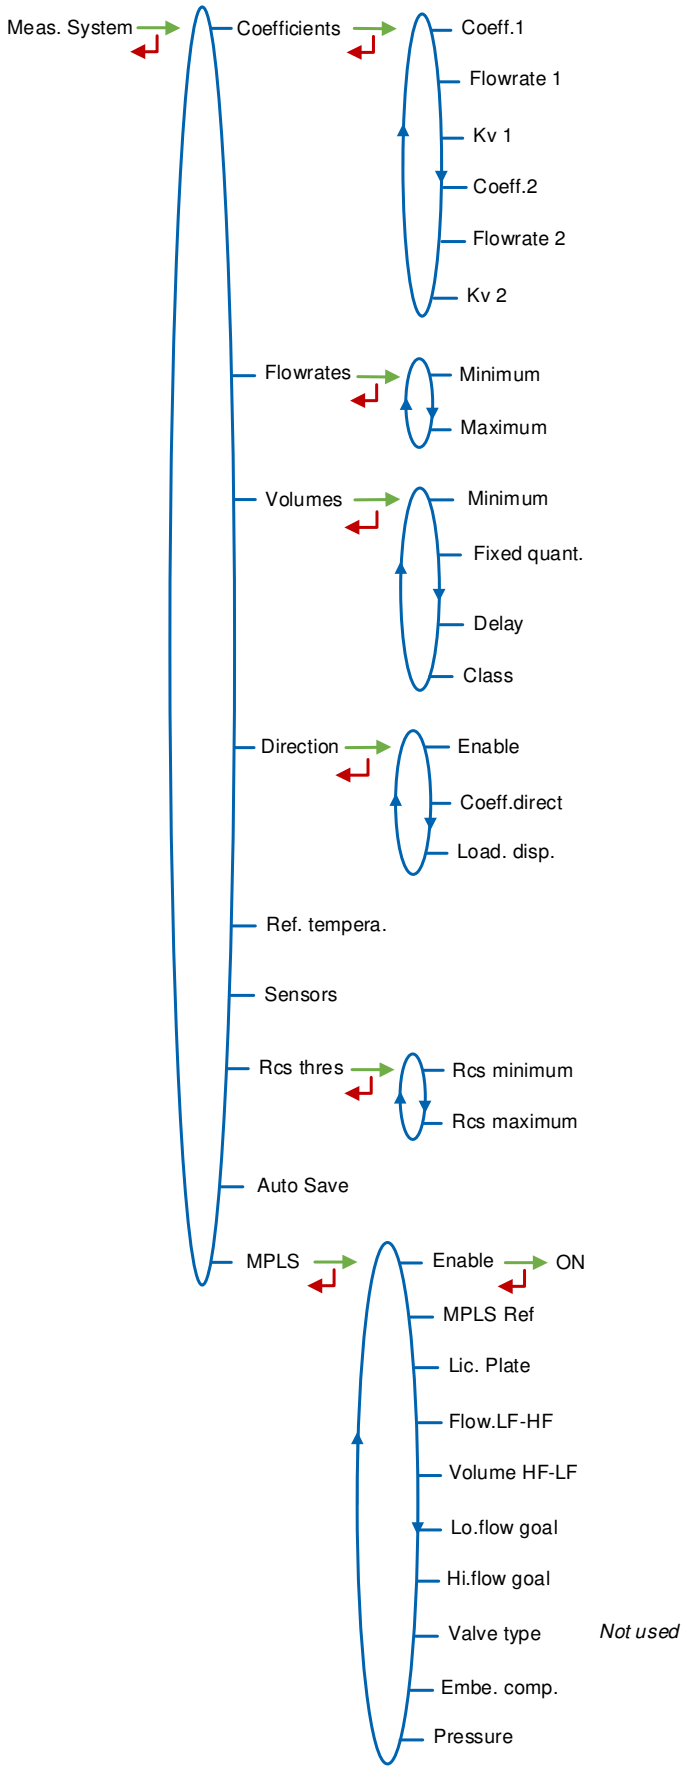
This menu is used to display the parameters set in METROLOGICAL mode. The values depend on the configuration.



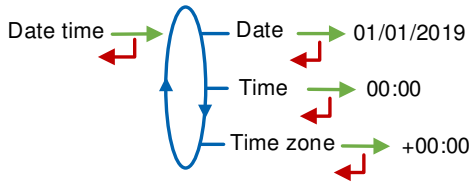
Example:



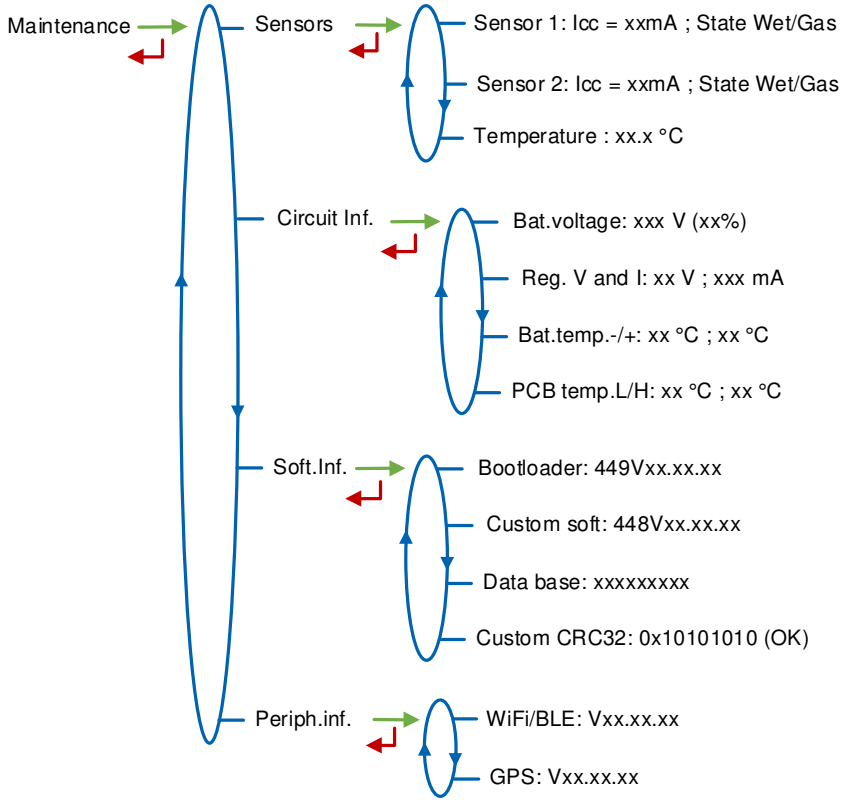




Meas. System
Coefficients
Coeff.1
Flowrate 1
Kv 1
Coeff.2
Flowrate 2
Kv 2
Flowrates
Minimum
Maximum
Volumes
Minimum
Fixed quant.
Delay
Class
Direction
Enable
Coeff.direct
Load. disp.
Ref. tempera.
Sensors
Rcs thres
Rcs minimum
Rcs maximum
Auto Save
MPLS
Enable
ON
MPLS Ref
Lic. Plate
Flow.LF-HF
Volume HF-LF
Lo.flow goal
Hi.flow goal
Valve type
Not used
Embe. comp.
Pressure



5.4.4 Sub-menu Maintenance



Sensors:

- **Sensor 1**:Current and status (wet or dry) of the Sensor 1
- **Sensor 2**:Current and status (wet or dry) of the Sensor 2
- **Temperature**: Product temperature

Circuit Inf.:

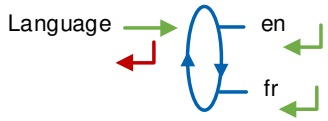
- **Bat.voltage**: Batteries voltage and remaining charge (from 0% to 100%)
- **Reg. V and I**: Internal supply voltage of the UNI-2 circuit
- **Bat.temp**: Batteries temperature
- **T°max; T°min**: Minimum and maximum values of printed circuit operating temperatures in °C

Soft.Inf.: Information about the software, the database and the app

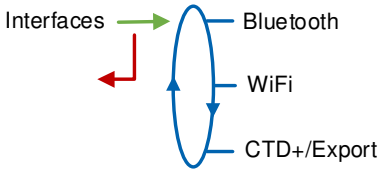
Periph.inf.: Information about peripherals (Wi-Fi, GPS)

5.4.5 Sub-menu Language

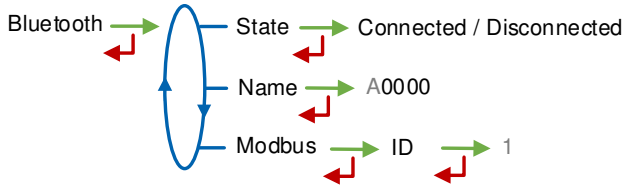
Select the display language. This menu is available if a translation catalogue is uploaded in the UNI-2.



5.5 Menu Interfaces



5.5.1 Sub-menu Bluetooth



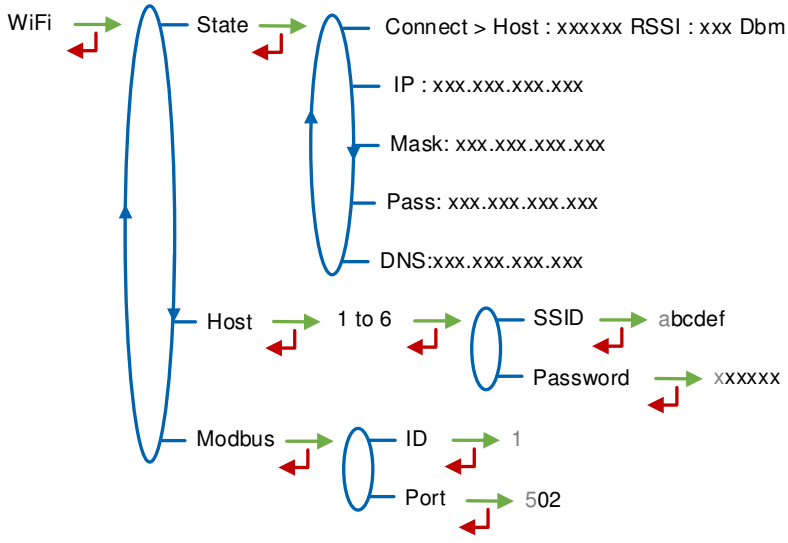
State: Status of the Bluetooth connection

Name: Set the alphanumeric value that corresponds to the connection name

Modbus→ID: ID: Modbus identifier via Bluetooth (between 1 and 254)

5.5.2 Sub-menu Wi-Fi

Characteristics of the wireless network access point



State:

- **Connect**: State of the Wi-Fi connection
- **IP**: IP address of the UNI-2
- **Mask**: Subnet mask (IP mask for the internal IP address allocation)
- **Pass**: Gateway (IP Address for the internet access of the Ethernet interface)
- **DNS**:IP Address to access a DNS server

Hosts: Number of the access point

- **SSID**: 32 characters-alphanumeric key that identifies the wireless network uniquely
- **Password**: Network password

Modbus:

- **ID**: UNI-2 Modbus identifier between 0 and 255
- **Port**: TCP/IP access port for Modbus protocol

5.5.3 Sub-menu CTD+/Export

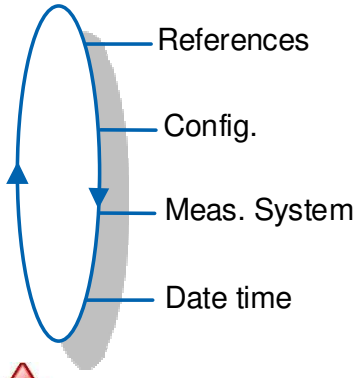
Nb. of days: Set the number of days N for the transfer of the measurement results on the CTD+. If N=007, the measurement results of the last 7 days will be transferred

5.6 List of alarms

Should a fault occur, the UNI-2 displays Alarm: name of the default at the bottom of the screen. The volume remains visible. The operator acknowledges the fault by pressing VALID (even when pouring). Apart from battery related faults, persistent faults cannot be acknowledged. Once the fault is acknowledged, the selected value is displayed alternately with "-------" to indicate that the measured values are no longer guaranteed.

	DISPLAY	MEANING	ACTION
USER	Overflow	Volume greater than 4 194 304 liters	Reset the device
	Low flowrate	Flow rate less than the setting minimal flow rate	Check the hydraulic configuration and the flowing
	Sensor 1	High gas detector fault (GDh)	Use the maintenance menu to check the status of the detector
	Sensor 2	Low gas detector fault (GDl)	Use the maintenance menu to check the status of the detector
	Direction	Flow direction change during metering	Check the hydraulic configuration and the flowing
	Failure	Problem with the transfer of the files to the CTD+ key	See GU 7110
REPARATOR	Flowrates	Flow setting fault	Check the parameters
	Frequency	Frequency fault	Check the parameters
	Coefficients	Difference two coefficients is greater than 0.5%	Check the coefficients setup
	Metering	Problem of metering with the meter	Check the setup
	High flowrate	Flowrate greater than the setting maximum flowrate	Check the setup
	Low flow high	Flow greater than $20m^3/h$ while GDh dry	Check the setup
	Date time	Loss of date and time	Set date and time in metrological mode or use the menu 'Connect>Sart GPS' to switch on the GPS. This operation must be done outdoors. It lasts one minute to synchronize the clock
	Gas	GDh is wet but GDl is dry	Check the hydraulic configuration / Check the detector status
	Dry metering	When using a pump. The volume of gas is greater than the minimum measured quantity	Stop metering
	Coil	Loss of pulse transmitter signal	Check the connection with the pulse transmitter
	Temperature	Temperature less than -20°C or greater than 50°C	Check the temperature sensor (measure and calibration)
	Display	LCD display fault	If steady alarm, substitution of the UNI-2
	Watch dog	Fault with card	If steady alarm, substitution of the UNI-2
	Program	Error on the cheksum of the metrological data	If steady alarm, substitution of the UNI-2
	RAM	Saved memory fault	If steady alarm, substitution of the UNI-2
	Memory	Bad writting into the memory	If steady alarm, substitution of the UNI-2
	Metrological	Configuration loss	If steady alarm, substitution of the UNI-2
	Low Battery	The battery is no more charging	Substitution of the battery
	Totalizer	Totalizer fault	If steady alarm, substitution of the UNI-2
	Memory Default	Problem with the measurement integrity: loss of backup data concerning the last measurement	If steady alarm, substitution of the UNI-2
	Communication	Communication fault with IRDA link	Check the IRDA link
	Reception	Problem of communication protocol between the UNI-2 and the CTD+	Check the compatibility
	Micro SD card	Problem with the micro SD card	Check the micro SD card is in. Try another one if necessary

6 CONFIGURE THE UNI-2: METROLOGICAL MODE



Setup should be done under cover, metering off, with dry gas detectors.

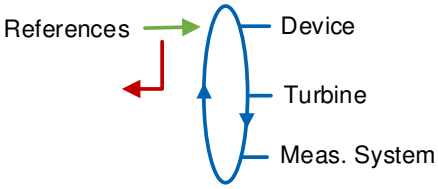
NOTE: Only approved persons are permitted to change parameters

The configuration parameters can only be modified by pressing the micro BP Metro on the electronic board.

Exit the METROLOGICAL MODE by pressing the micro BP Metro. The UNI-2 resets.

The option to display the volume (volume in metering conditions or volume converted to base conditions) is made in menu Meas. System>Temperature>Vol. disp. when the temperature is activated.

6.1 Menu References

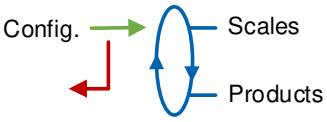


Device: Set the serial number of the UNI-2

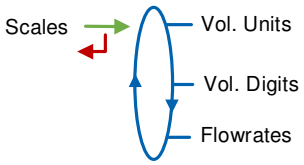
Turbine: Set the serial number of the turbine meter

Meas. System: Set the serial number of the measuring system

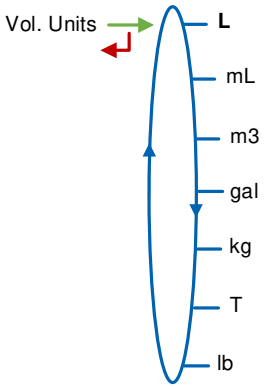
6.2 Menu Config.



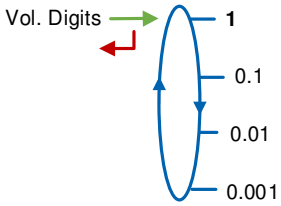
6.2.1 Sub-menu Scales



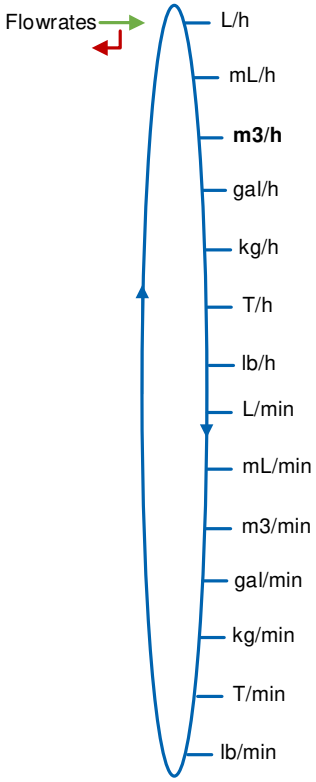
Vol. Units: Select the unit of the volume.



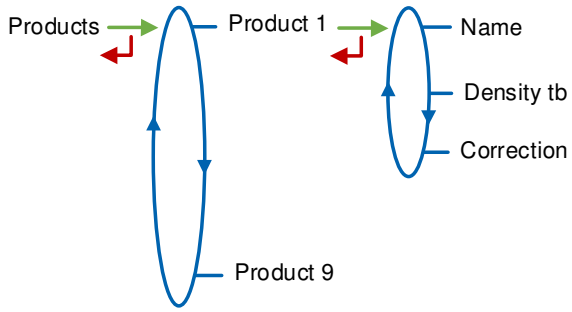
Vol. Digits: Select the accuracy of the volume.



Flowrates: Select the unit and the accuracy of the flowrate.



6.2.2 Sub-menu Products



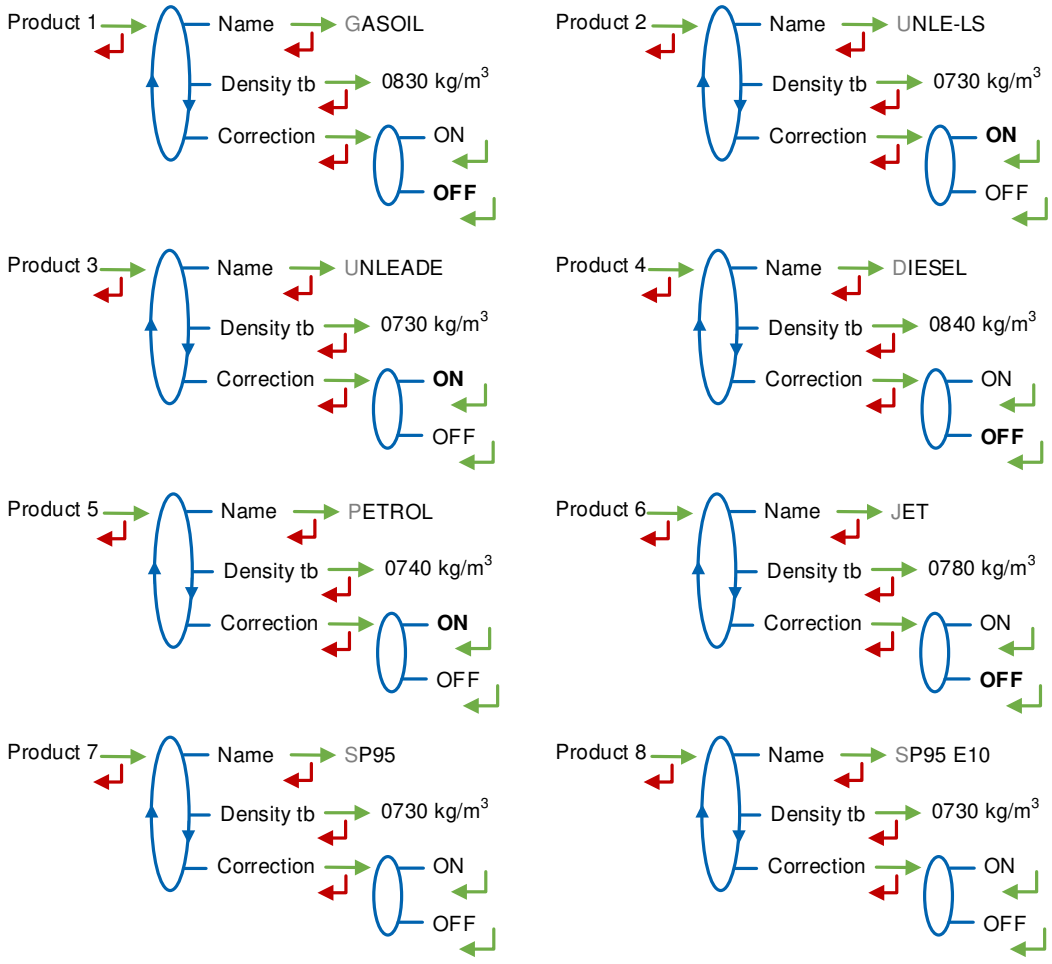
You can configure 9 different products.

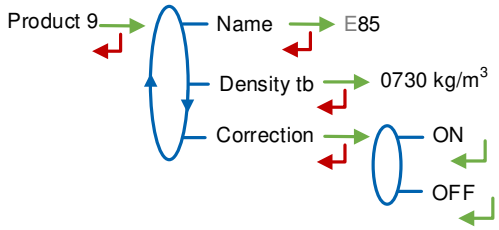
Name: Enter the product name

Density tb: Enter the density in kg/m^3 in base conditions (min: 550 max: 1100). Set 0000 to remove the product from the list displayed in USER mode

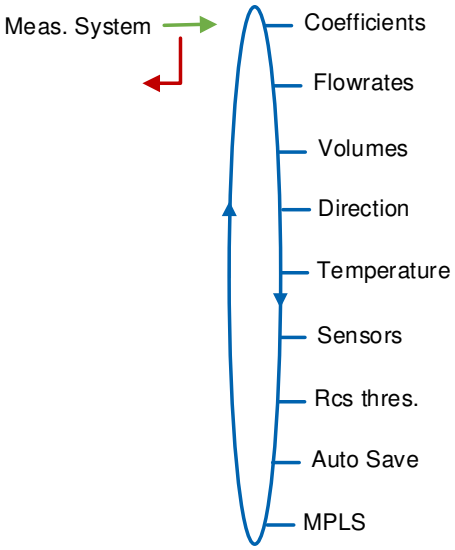
Correction: Select if the correction is on or off for the product. If Density tb≤750 → Correction=ON. Otherwise→ Correction=OFF

The UNI-2 is configured as follows:





6.3 Menu Meas. System



6.3.1 Sub-menu Coefficients

Coeff.1: Coefficient for low flow (pulses/liter)

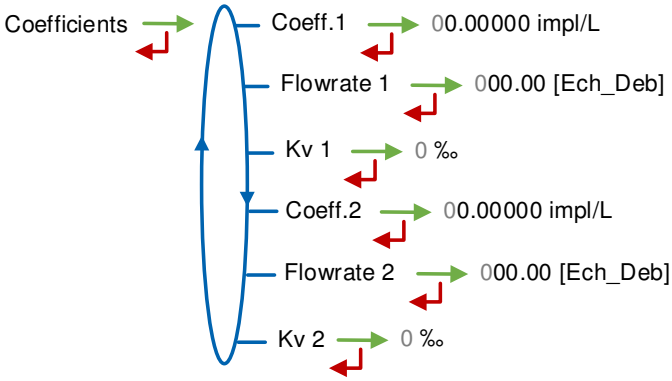
Flowrate 1: Flowrate corresponding to Coeff.1. Unit depends on the configuration (Config.>Scales>Flowrates)

Kv 1: Correction coefficient in (‰) at flowrate 1 for low viscosity products

Coeff.2: Coefficient for high flow (pulses/liter)

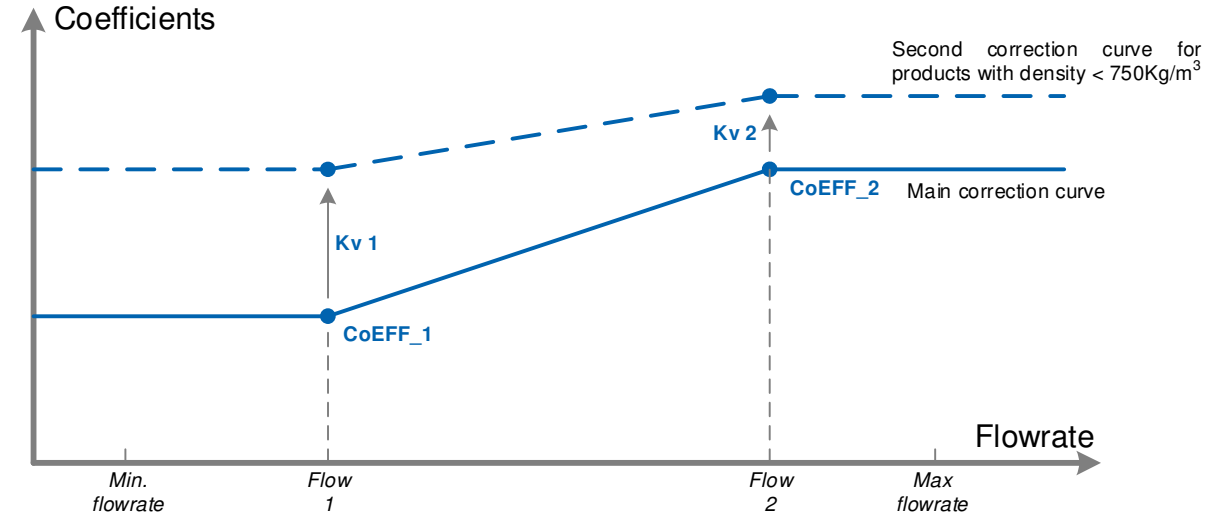
Flowrate 2: Flowrate corresponding to Coeff.2. Unit depends on the configuration (Config.>Scales>Flowrates)

Kv 2: Correction coefficient in (‰) at flowrate 2 for low viscosity products



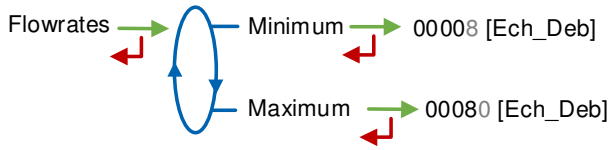
When parameters Flowrate 1 and Flowrate 2 are set to zero, parameters Coeff.2 and Kv 2 are not applied.

Adjustment of coefficients for several flowrates:



Coefficients applied in accordance with flowrate and product density

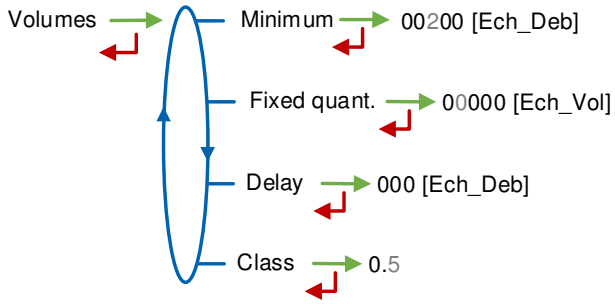
6.3.2 Sub-menu Flowrates



Minimum: Minimum flowrate of the measuring system. Unit depends on the configuration (Config.>Scales>Flowrates)

Maximum: Maximum flowrate of the measuring system. Unit depends on the configuration (Config.>Scales>Flowrates)

6.3.3 Sub-menu Volumes



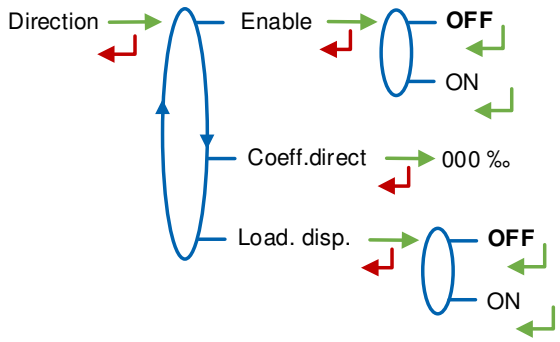
Minimum: Minimum measured quantity to guaranty the measurement. Unit depends on the choice made for the scale interval

Fixed quant.: End of counting fixed volume of the measuring system. Unit depends on the choice made for the scale interval. Not applicable without gas detectors

Delay: Delay for the additional volume (upper gas detector dry). Unit depends on the choice made for the scale interval. Not applicable without gas detectors

Class: Accuracy class of the measuring system. Authorized values: 0.5 or 1

6.3.4 Sub-menu Direction



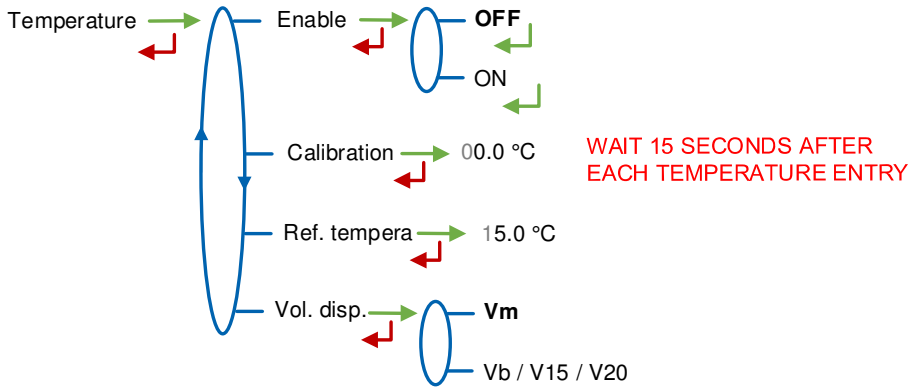
Enable: Choose ON if the UNI-2 is intended to detect the loading direction and is able to sum loading volumes in a specific totalizer (non guaranteed volumes)

Coeff.direct: Additional correction coefficient (‰) for loading direction. Authorized values: interger between ±30

Load. disp.: Choose ON to enable display and memorization of volumes for loading direction

6.3.5 Sub-menu Temperature

This menu is an option. It is used to calibrate the temperature into the UNI-2. See maintenance sheet FM 8513



Enable: Enable or disable the product temperature control

Calibration: The temperature calibration can be done either on two measuring points or on a single measuring point.

- Calibration on two temperature measuring points:

  The measure must be done outside the range -20 to +50°C. First point at t<-20°C, second point at t>+50°C
- Calibration on a single temperature measuring point:

  The measure must be done in the range -20 to +50°C.

Ref. tempera: Reference temperature (°C)

Vol. disp.: Choose the volume displayed in USER mode:

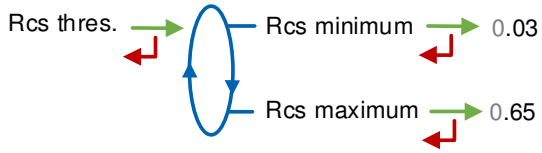
- **Vm**: Volume in metering conditions
- **Vb**: Volume converted to the reference temperature

6.3.6 Sub-menu Sensors

ON: Before validation, make sure both gas sensors are dry and well-connected to the UNI-2.

6.3.7 Sub-menu Rcs thres.

Detection thresholds of metering inputs at zero flow and at maximal flow.



6.3.8 Sub-menu Auto Save

Set the time required at the end of measurement before automatic recording of the measurement data (in seconds).

UNI-2

- Auto Save=0: Data recording is manual, it is done by pressing RESET. It causes the volume reset.
- Auto Save>1: Data recording is automatic, it is done when the time-out is up. The RESET key is disabled. The volumes counted during the time-out are added at recording of the measurement data.

  For example, the parameter can have the value that follows:

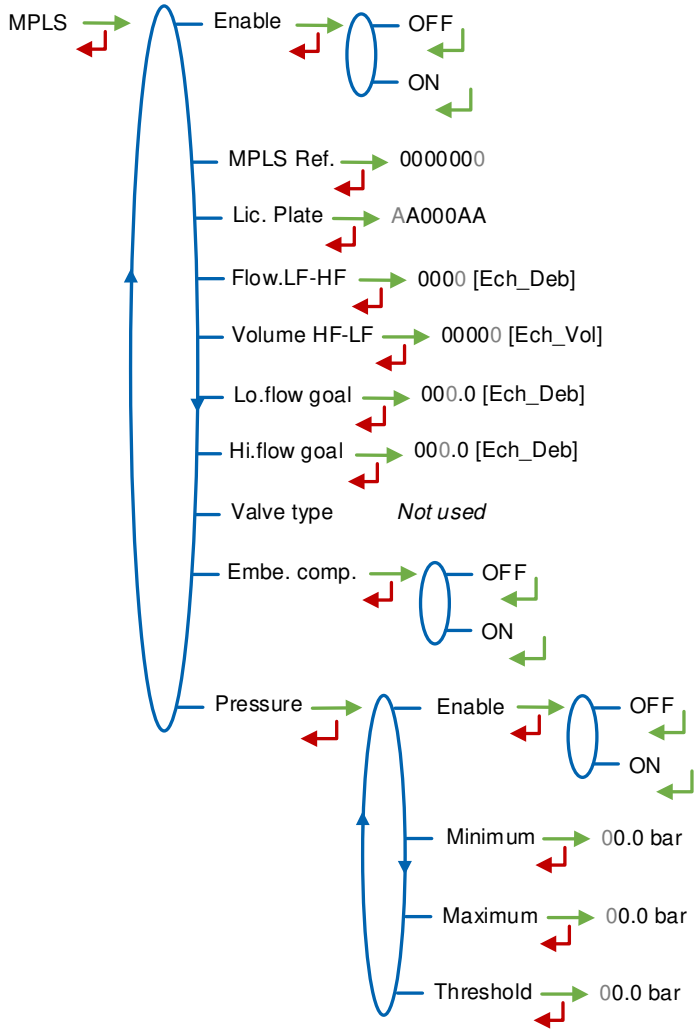
  Auto Save=060. Automatic recording with time-out 60 seconds

UNI-2 MPLS

This parameter is zero. Withdrawal of the authorization causes recording of the measurement data.

6.3.9 Sub-menu MPLS

This menu must be activated if the UNI-2 is associated to an MPLS device.



Enable:Choose ON to activate the option

MPLS Ref: Serial number of the MPLS

Lic. Plate: Vehicule licence plate

Flow.LF-HF: Flowrate beyond which the UNI-2 switches from low to high flowrate Unit depends on the choice made for the scale interval

Volume HF-LF: Volume beyond which the UNI-2 switches from high to low flowrate. Unit depends on the choice made for the scale interval

Lo.flow goal: Objective low flow. Unit depends on the choice made for the scale interval

Hi.flow goal: Objective high flow. Unit depends on the choice made for the scale interval

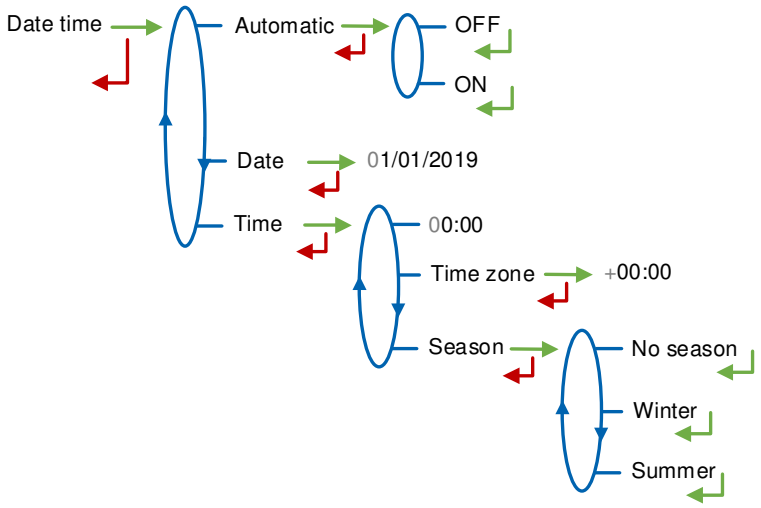
Embe. comp.: Operation with or without an embedded computing

Pressure:

- **Enable**: Operation with or without pressure transmitter
- **Minimum**: Minimum pressure of the pressure transmitter (bar)
- **Maximum**: Maximum pressure of the pressure transmitter (bar)
- **Threshold**: Minimum pressure threshold below which a default occurs (bar)

6.4 Menu Date time

This menu is used to define date and time according to the destination country.



Automatic:

- **OFF**: Date and time are set manually
- **ON**: Timing recovery with the GPS

Date: Set the date day/month/year (dd/mm/yyyy)

Time:

- **00:00**: Set the time hour:minutes (hh:mm).
- **Time zone**: Set the jet lag related to the time zone. E.g.: set +01:00 for the Brussels, Copenhagen, Madrid, Paris time zone (UTC+01:00)
- **Season**:
  - **No season**: No time change when the season changed
  - **Winter**: Winter-time (at commissioning)
  - **Summer**: Summer-time (at commissioning)

  Time change is done in USER mode with the menu Supervisor>Season

ANNEX

Delivery ticket for measuring system connected to a printer
(UNI-2 MPLS).
