1. GENERAL RECOMMENDATIONS

IN ORDER TO AVOID ALL THE PROBLEMS CONCERNING THE INSTALLATION, THE OPERATION AND THE MAINTENANCE OF THE EQUIPMENTS, BEING ABLE TO CREATE INOPPORTUNE FAILURE, PLEASE RESPECT THE FOLLOWING RECOMMENDATIONS.

BEFORE ANY WORK, MAKE SURE THAT THE EQUIPMENTS ARE NOT POWERED.

MECANICAL RECOMMENDATIONS

- Respect the recommendations of the instruction manual specifying the installation, operation and maintenance conditions of the ATEX equipments (instruction manual supplied with the equipments).
- Take care to place the equipments in order to facilitate their installation, operation and maintenance by the technicians (working ergonomics).
- Take care to position properly the equipment; the display must be readable without any difficulty.
- Apply a tightening torque suitable with size and material of the fixation element except particular specifications mentioned on the presentation drawing or in the installation guides.
- Mechanically protect the cables with the corrugated conduit if the cables are not ADR (corrugated conduit adapted to vehicles used for "carriage of dangerous goods of road" - hydrocarbons, LPG … - and meet the requirements of French standard NF R13-903).
- Ensure there are a good mechanical strength and a good sealing between cable glands and cables, and between cable glands and corrugated conduit.
- Respect cables and corrugated conduit radii of curvature.
- Leave enough flexibility to wires in order to avoid any risk of stripping.
- Allow the drainage of the water in the lower loop (siphon) of the corrugated conduit (not water retention inside the corrugated conduit).

ELECTRICAL RECOMMENDATIONS

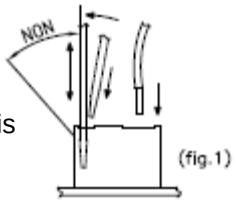
- Respect the recommendations of the instruction manual specifying the installation, operation and maintenance conditions of the ATEX equipments (instruction manual supplied with the equipments).

- Connect the supply of the equipments downstream cut-out, on the power supply reserved to the measured distribution.

- Put a delayed protection of 5A upstream the 24VDC supply to protect equipments in case of reverse polarity or overcurrent.

- Use ADR specific cable, if it is not the case, use at minimum a cable resisting to hydrocarbons. Mechanically protect this cable with a corrugated conduit (corrugated conduit adapted to vehicles used for "carriage of dangerous goods by road" - hydrocarbons, LPG … - and meet the requirements of French standard NF R13-903).

- Take care not to damage the terminals of the different electronic boards while wiring.
  - Screw terminals: do not damage the screw heads of the terminals.
    - Use insulated lugs and insulated wire ferrules adapted to the section of wires.
  - Spring terminals: do not block the springs (if a spring is blocked, the electronic board must be replaced).
    - Use flat screwdriver 0.4x2.5 (see fig.1).
    - Insert the screwdriver slightly tilted, then push it perpendicularly to the terminal.
    - Do not exceed the upright position when the screwdriver is down in order not to block the spring.
    - Insert or remove the wire and remove the screwdriver.



(fig.1)

- Pass the power supply cores (24Vdc truck) through the ferrites by carrying out a loop (ALMA supply).

- Do not use wires of section higher than 1.5mm².

- Do not insert more than two wires in a terminal, if necessary use an insulated twin wire ferrule (unless otherwise indicated).

- Strictly respect the polarities of the input/output when wiring, in accordance with serigraphy on the cards and/or with the installation guide indications.

- Whenever possible, perform a wired test, after wiring and before powering.

- Whenever possible, respect the locations of the cables specified in the installation guide.

- Equipments must be connected to the frame ground (external ground connection).

- Whenever possible, use shielded cables with a 360° connection through the metal cable glands (see the documentation delivered with the equipments).
  Otherwise, connect the shields to devices inside the equipment (ground terminal, earth bar, earth boss…).

- Whenever possible, label the cables and cores according to the installation guide to facilitate the later maintenance operations.

- Respect a homogeneous wire colour code.

- Printer TMU295: before positioning the printer on its support, check that configuration switches of the data link protocol, located under the printer, are well positioned: No 3 on "ON" and the 7 others on "OFF".

- Current of the MICROCOMPT+ and printer:

ALMA equipment	Supply voltage	Current mini.	Current maxi.
MICROCOMPT+	24VDC +/-10%	0.7 A	1.5 A
IMPRIMANTE	24VDC +/-10%	0.1 A	5.5 A (switch-on)

- Colour code according to DIN 47100.

- Code for designation of colours according to IEC 60757 (except FR codes):

FR				EN	IT	ES	DE
Couleurs	Codes		Standard codes CEI 60757	Colours	Colori	Colores	Farbe
Blanc	**Bc**		**WH**	White	Bianco	Blanco	Weiß
Marron	**Mr**		**BN**	Brown	Marrone	Marrón	Braun
Vert	**Vt**		**GN**	Green	Verde	Verde	Grün
Jaune	**Jn**		**YE**	Yellow	Giallo	Amarillo	Gelb
Gris	**Gr**		**GY**	Grey	Grigio	Gris	Grau
Rose	**Rs**		**PK**	Pink	Rosa	Rosa	Lila
Bleu	**Bl**		**BU**	Blue	Blu	Azul	Blau
Rouge	**Rg**		**RD**	Red	Rosso	Rojo	Rot
Noir	**Nr**		**BK**	Black	Nero	Negro	Schwarz
Violet	**Vi**		**VL**	Violet	Viola	Violeta	Violett
Orange	**Or**		**OG**	Orange	Arancio	Naranja	Orange
Vert/Jaune	**V/J**		**GNYE**	Green/Yellow	Verde/Giallo	Verde/Amarillo	Grün/Gelb

PNEUMATIC RECOMMENDATIONS

- Air must be filtered – from 40 to 20µm. Specific recommendations may be added in the installation guides or on the presentation drawings.
- The air lubrication must be permanent and correct to avoid any damage on the pneumatic components.
- The air supply pressure to the inlet of the equipments must be at least 6 bar and max 8 bar. Specific recommendations may be added in the installation guides or on the presentation drawings.
- The pneumatic supply pipes (6/4) must be cut straight (no slanting cut) and should not be crushed after cutting to prevent leakage on fittings.
- Respect the radii of curvature of the pneumatic pipes indicated by the manufacturer.
- Use colored pneumatic pipes to ease maintenance operation.
- In no case the exhaust holes of the pneumatic organs should be plugged, obstructed, unless if that is clearly specified in the installation guides or on presentation drawings.
- The use of muffler is not allowed under any circumstances (fouling, frost…). Put a pneumatic pipe of sufficient length, pointed downwards, so that its end is placed in a protected area (L = 100 mm min.).
- Pressure unit conversion:

PRESSURE UNIT CONVERSION				
Unités	**Bar**	**PSI**	**Pascal**	**kg/cm²**
1 Bar =	1	14,5	100 000 ($1x10^5$)	1,0197
1 PSI =	0.069	1	6894,5	0,07031
1 Pascal =	$1x10^{-5}$	$14,5x10^{-5}$	1	$1,0197x10^{-5}$
1 kg/cm² =	0,98	14,22	98066,5	1

PSI = Pound per Square Inch (livre par pouce carré)
1 bar = 100 kPa = 0.1 MPa (1 MPa = 10 bar)

2. GENERAL PRESENTATION

MEASURING SYSTEM INSTALLED ACCORDING TO MID CERTIFICATE

The CMA TRONIQUE measuring system is covered by the EC type examination certificate N° LNE-14983. Refer to this certificate for any precision about its installation.
For the sealing plan, see Annex to EC type examination certificate N° LNE-14983.

SPECIAL CONDITIONS FOR INSTALLATION IN ANY CASES

ALMA CPR3000 pressure sensor is to be installed:

- ⇨ If possible by an equal distance between filter and pump entry, and in all cases with a minimal distance 200mm upstream from the pump entry
- ⇨ At the most vertical position regardless of the nipple on the pipe.

Any disruptive system (filter, valve, etc.) cannot be situated between the pressure entry and the pump entry.
Connection pipework between the compartments and the pump must have a minimum gradient of 3%. In case of a manifold configuration, this requirement is limited to the following conditions:

- ⇨ 3% minimum gradient of the pipe between bottom flap and manifold
- ⇨ No reverse slope between manifold and pump entry.

If the measuring system is fitted with two delivery points, it needs to be equipped with a device allowing a liquid delivery by only one point at once.

3. PART LIST

EQUIPMENTS INCLUDED IN THE MEASURING SYSTEM DELIVERED BY ALMA				
Item	**Equipment**	**Designation**	**Qty**	**Option***
1		**CALCULATOR INDICATOR MICROCOMPT+ CMA TRONIQUE** NON ATEX or ATEX (Provided with a magnetic supervisor key)	**1**	
2		**ADRIANE TURBINE METER DN50-50 or DN80-80** (Depending on configuration)	**1**	
3		**ADRIANE TURBINE METER DN80-80 373 PN16 AD-BLUE** (Only for CMA Ad-Blue)	**1**	

Non-contractual pictures

EQUIPMENTS INCLUDED IN THE MEASURING SYSTEM DELIVERED BY ALMA

Item	Equipment	Designation	Qty	Option*
4		**RELATIVE PRESSURE SENSOR – CPR3000** NON ATEX or ATEX (Supplied with hydraulic shock absorber)	1	
5		**PRINTER TMU-295** (Printer – power supply cable – serial link cable 10m)	1	
6		**CONVERTER 24VDC/24VDC 2.1A 50W** (Printer power supply 24VDC)	1	
7		**NON-RETURN VALVE KIT DN50 or DN80** (Depending on configuration)	1	
8		**SIGHT KIT DN50 or DN80 FOR ADRIANE TURBINE METER** (Depending on configuration) (Supplied with pre-drilled screws for sealing)	1	
9		**NC/NO SOLENOID VALVES KIT** NON ATEX or ATEX	1	●
10		**PT100 TEMPERATURE SENSOR – CT1001** (Supplied with thermowell)	1	●

Non-contractual pictures

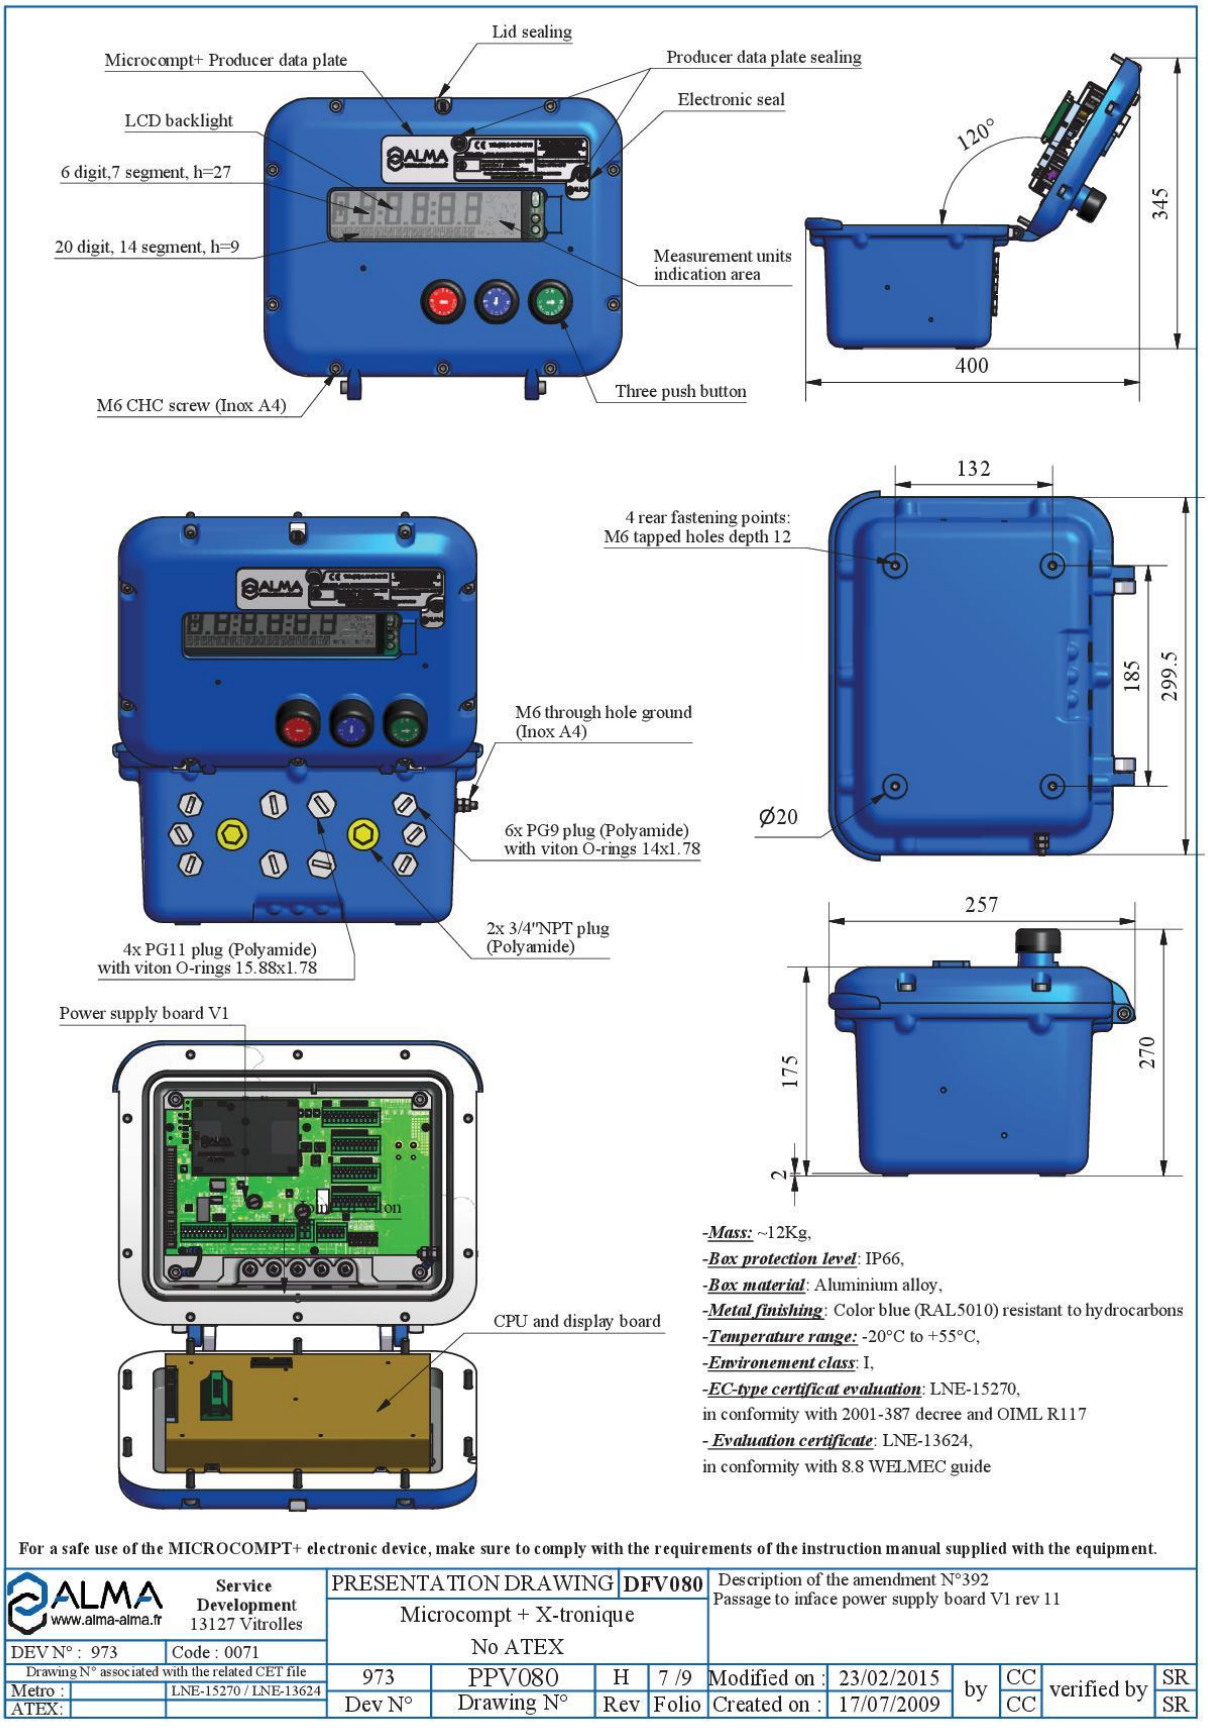
EQUIPMENTS INCLUDED IN THE MEASURING SYSTEM DELIVERED BY ALMA

Item	Equipment	Designation	Qty	Option*
11		**CONNECTION KIT DN50 or DN80** (Depending on configuration) (Supplied with pre-drilled screws for sealing)	1	●
12		**KIT FOR MEASURING SYSTEM IDENTIFICATION PLATE** (Plate and sealing device)	1	●

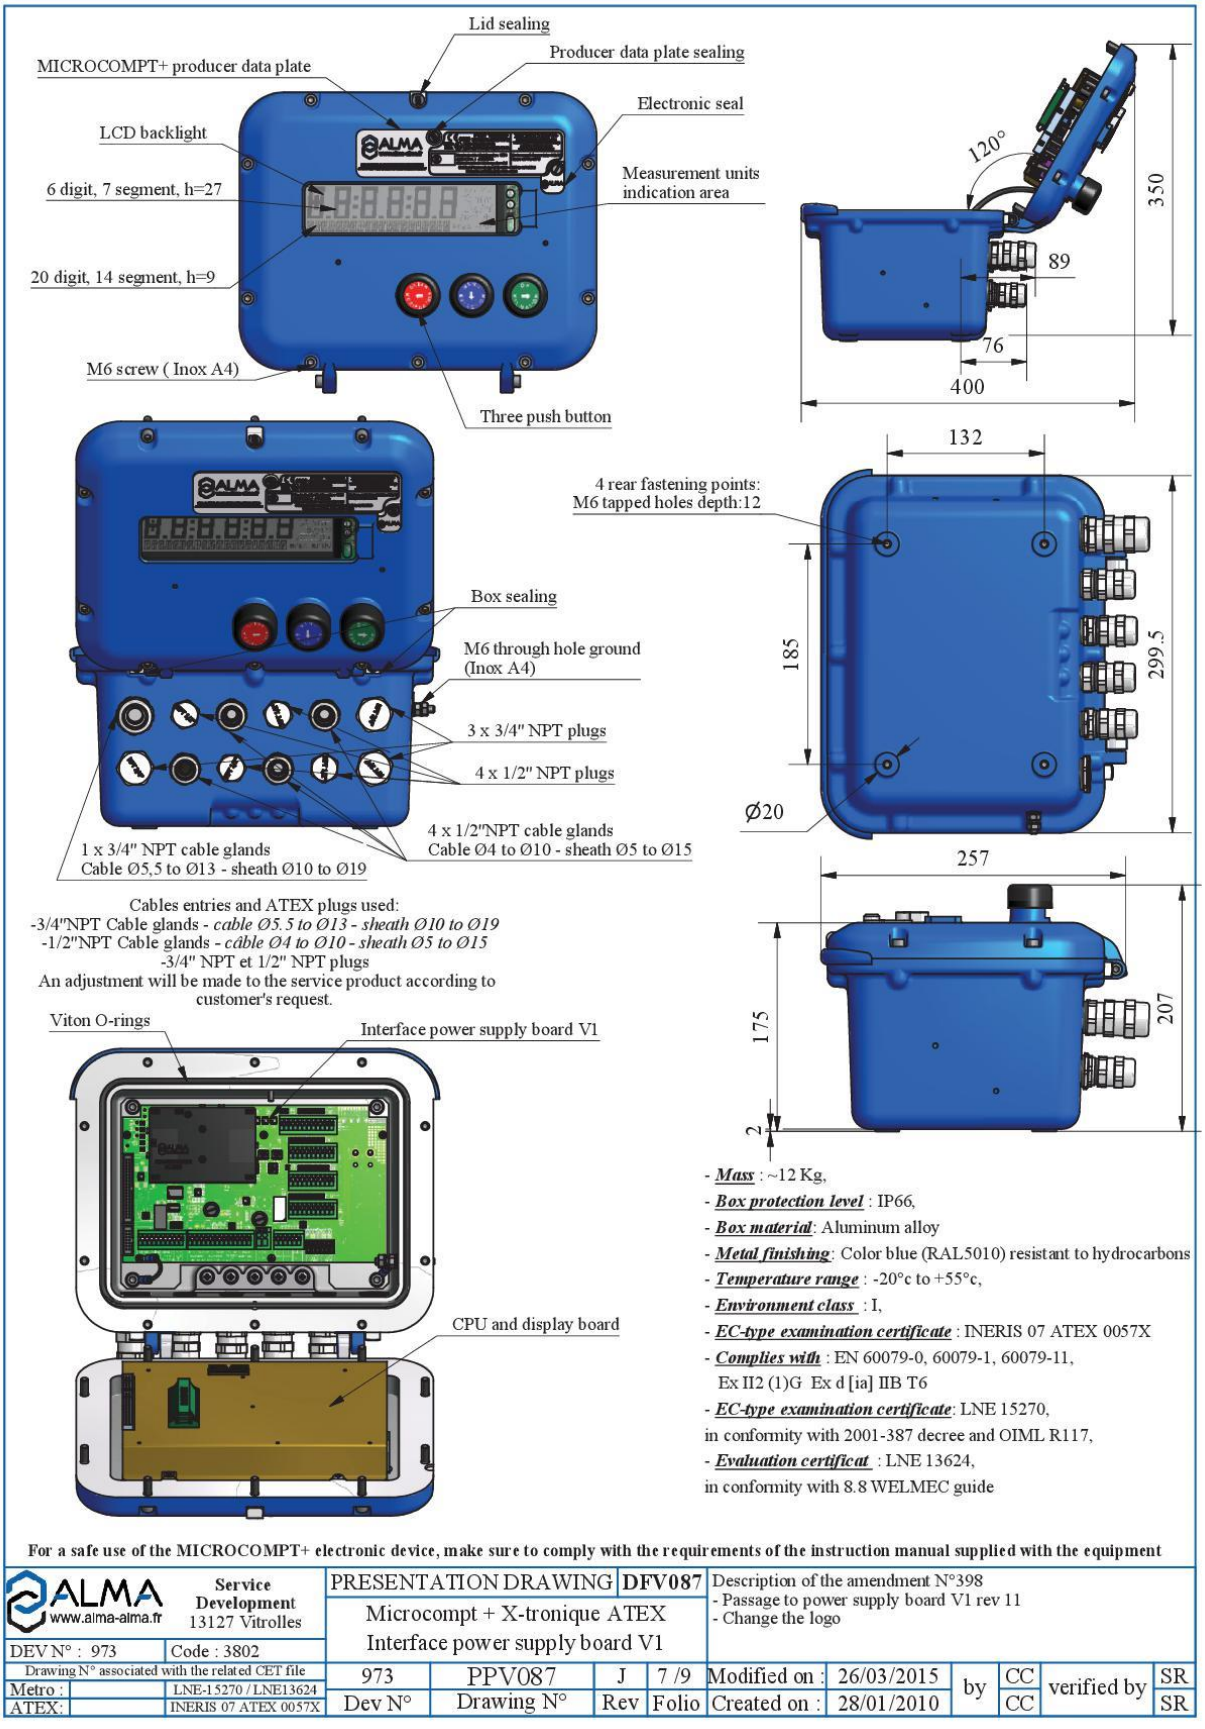
Option*: equipment sold as an option by ALMA must be installed on the measuring system if required by the certificate.

Non-contractual pictures

4. MICROCOMPT+ CMA TRONIQUE (NON ATEX)

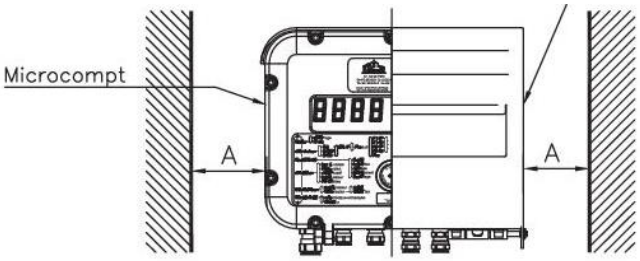


5. MICROCOMPT+ CMA TRONIQUE (ATEX)

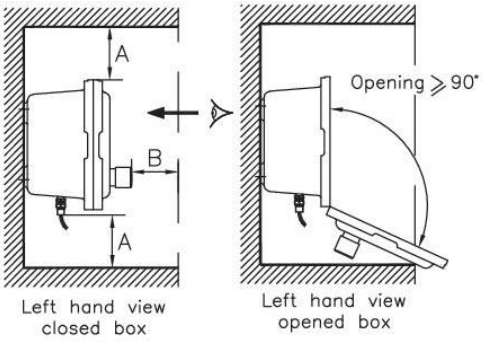


INSTALLATION RECOMMENDATIONS MICROCOMPT+

- Fasten the box with 4 M6 screws (holder suitable for vibrations and designed to support the MICROCOMPT). On the box: 4 M6 blind holes tapped length=12 over 185x132).
- Leave an open space around the box in order:
  - To facilitate maintenance operation.
  - To prevent any pressing on pushbuttons and on the glass.
- The space between the front face of the box and the cabinet door shall be sufficient.
- Dimensions: A > 100mm and B > 60mm



- SOLUTION 1: straight box if it's a breast height.



- SOLUTION 2: 20° angle if it's not a breast height.

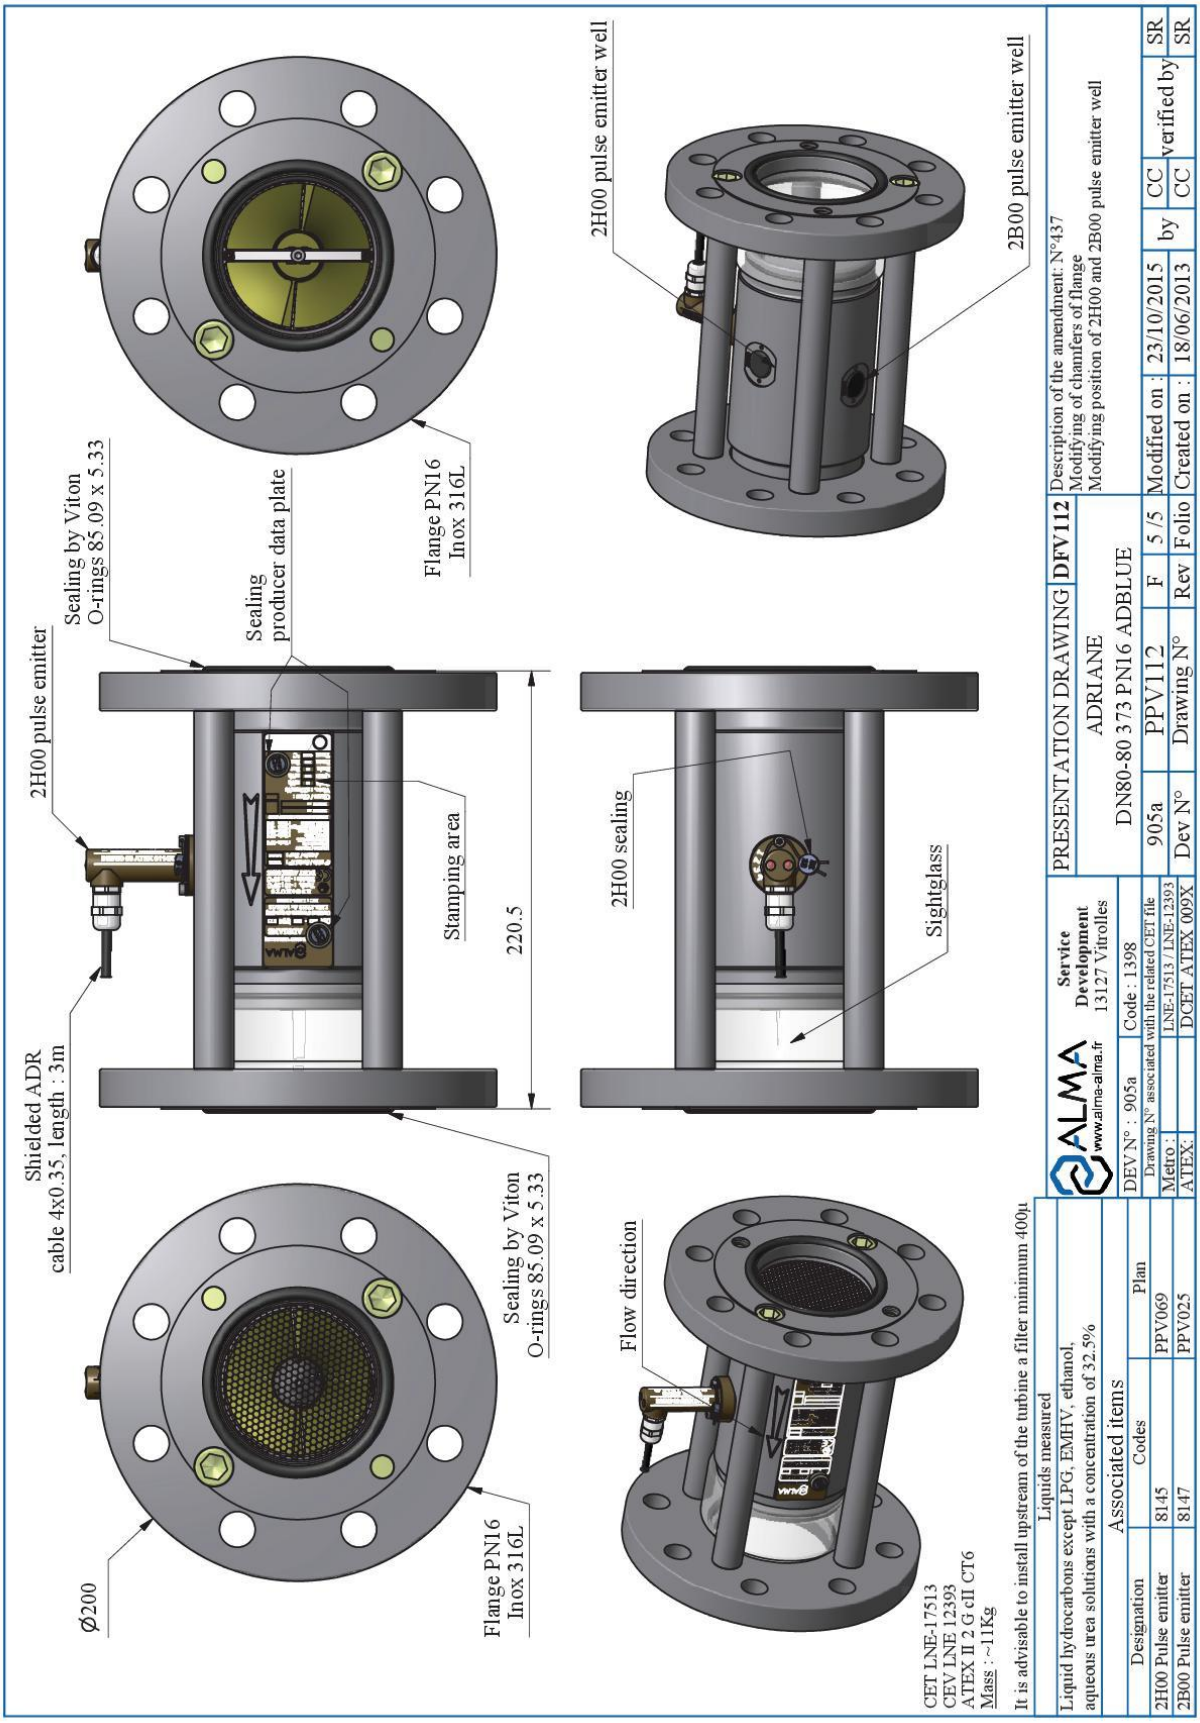
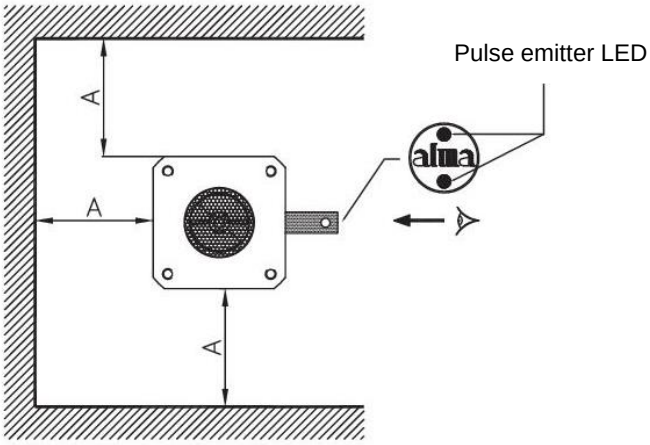
ADRIANE TURBINE METER DN80-80 373 PN16 ADBLUE



Document available on website alma-alma.fr

INSTALLATION RECOMMENDATIONS ADRIANE TURBINE METER

- The identification plate and the led of the pulse emitter(s) shall be visible and accessible.



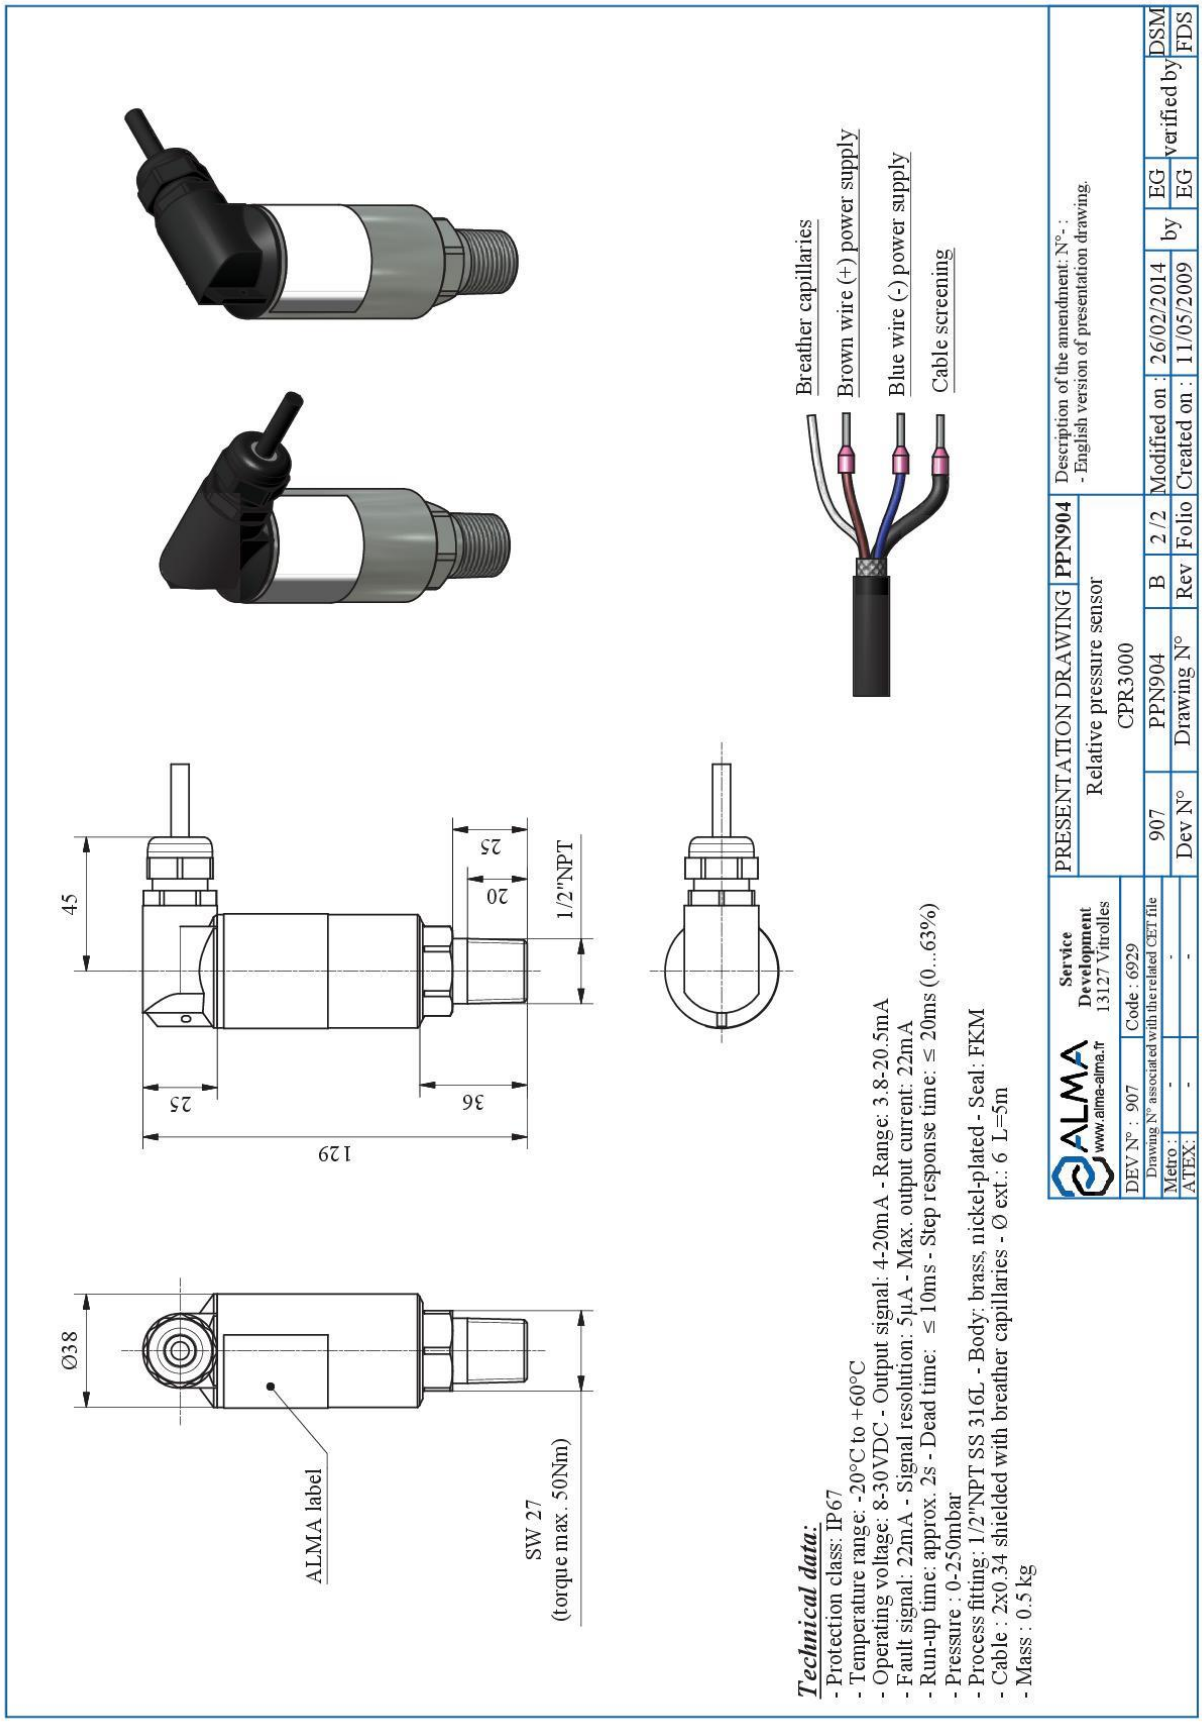
- The turbine must be installed with respect to the flow direction.
- Put sealing rings each other sides between the turbine and the backflanges.
- Leave an open space all around the turbine in order to ease maintenance.
- Install a 400µ filter (mini) on the pipe upstream from the turbine meter.
- After installation or during the commissioning period, if the new or modified pipes have not been perfectly cleaned or pickled and passivated, the turbine should be protected by a honeycomb sieve – max. 1mm mesh. It must be placed between two flanges upstream from the turbine.
- Dimensions: A > 100mm.

The meter may be installed:

- Between two straight pipe sections that have the same nominal diameter as the meter and which lengths is at least equal to 10 times this diameter upstream and 5 time downstream.
- Between two pipes that have the same nominal diameter as the meter, with shorter or no straight sections, provided that no flowrate adjustment device (eg. a variable-opening valve) is located upstream at a distance less than 10 times the nominal diameter.

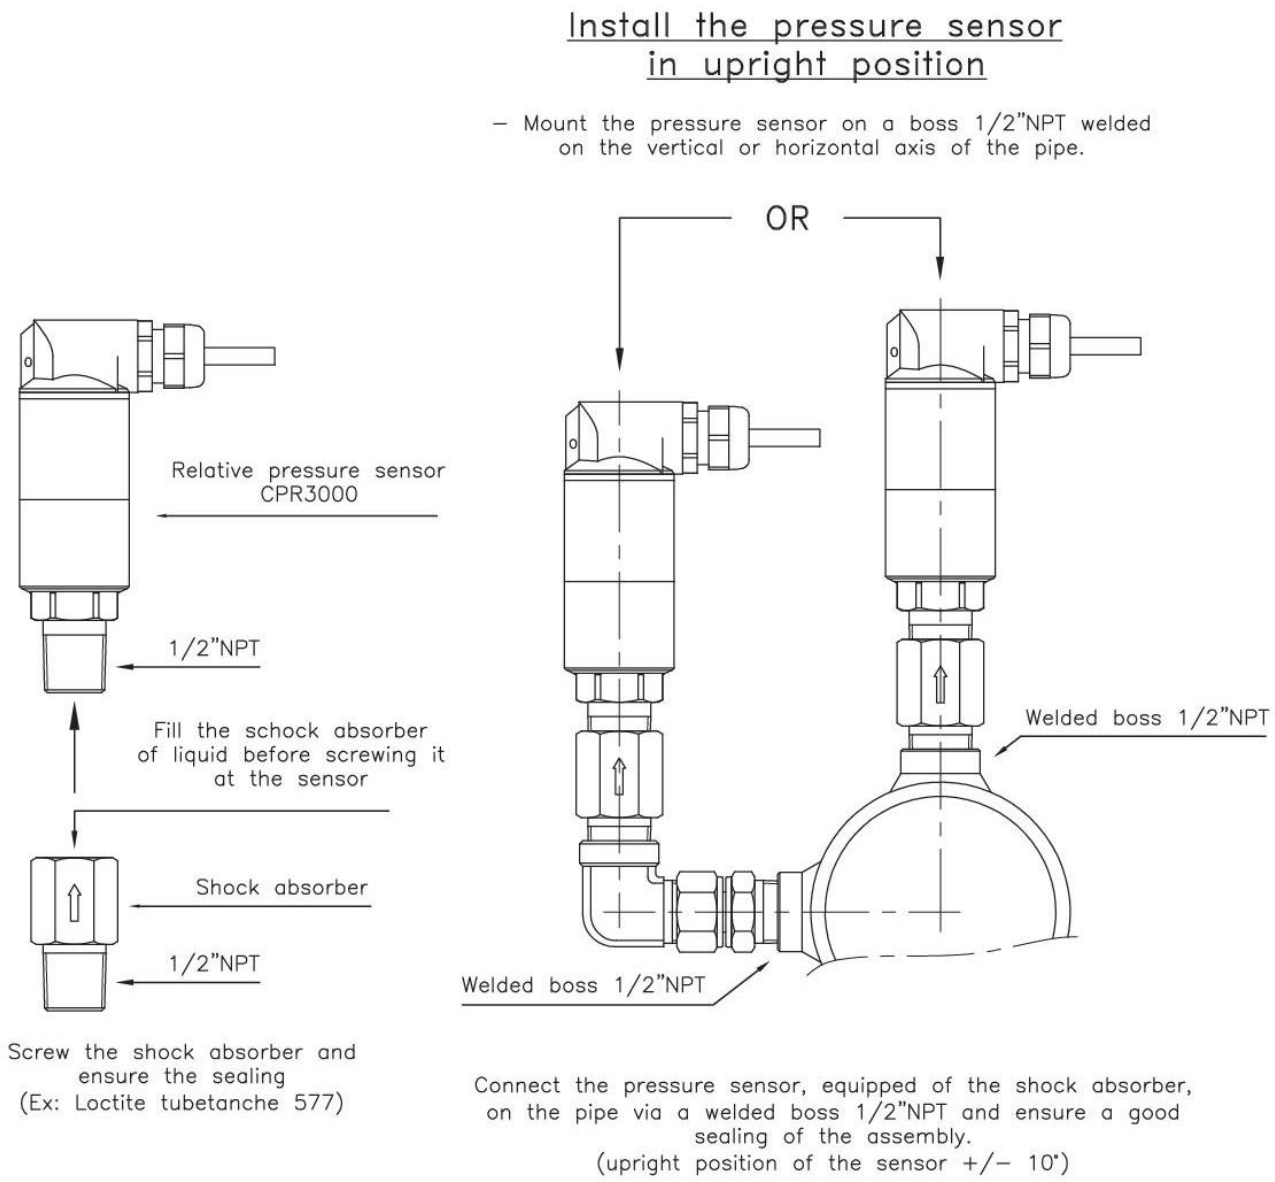
Provision contained in EC Type Examination or Evaluation Certificate.

7. RELATIVE PRESSURE TRANSMITTER CPR3000 (NON ATEX)



Document available on website alma-alma.fr

INSTALLATION RECOMMENDATIONS CPR3000 (NON ATEX)



DISTANCE BETWEEN THE PRESSURE SENSOR AND THE SUCTION FLANGE OF THE PUMP MUST BE AT LEAST 200mm.

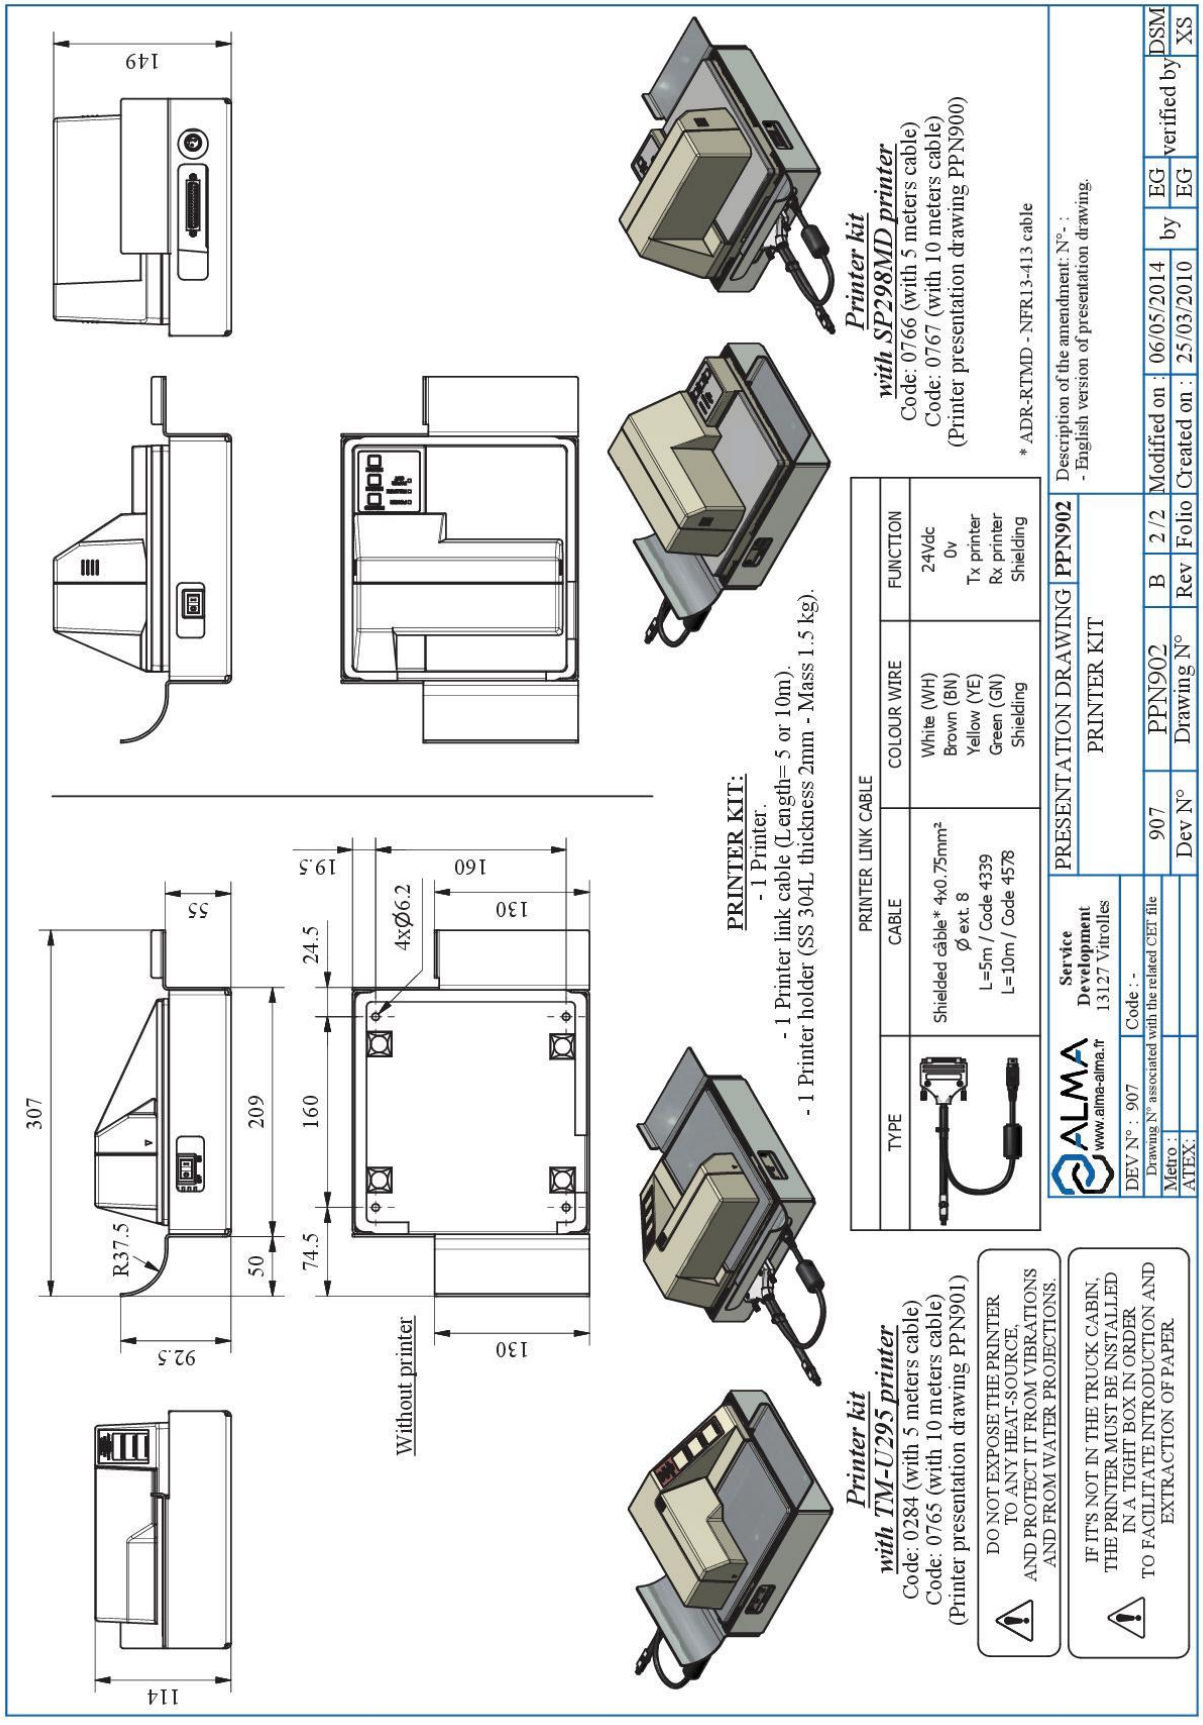
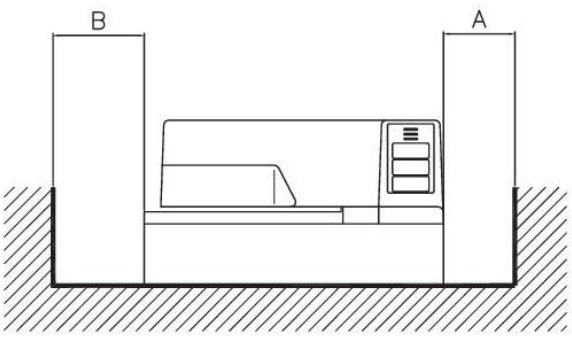
10. PRINTER

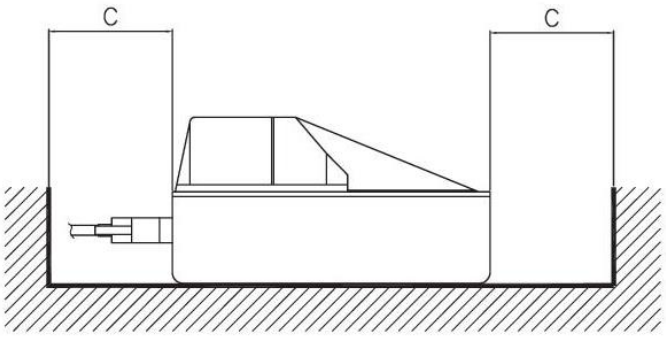


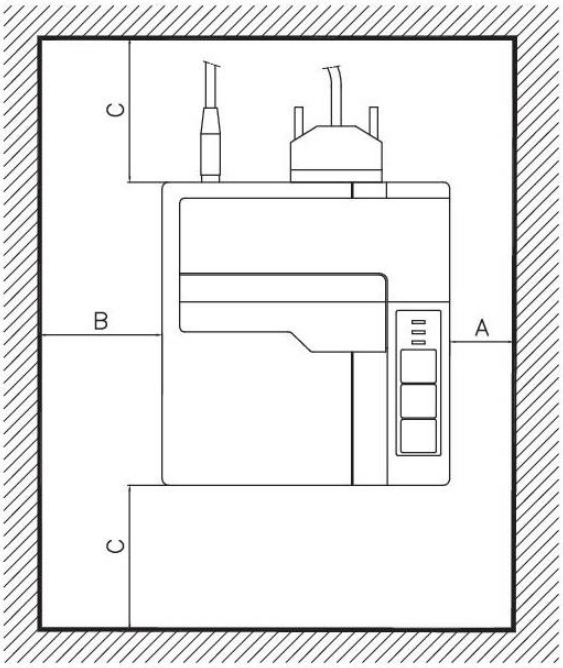
Document available on website alma-alma.fr

INSTALLATION RECOMMENDATIONS PRINTER

- Do not store anything above the printer.
- Leave an open space all around the printer to ease maintenance.
- Dimensions: A ≥ 50mm and B ≥ 100mm.







BOTTOM VIEW

The printer must be installed in a tight box and be laid out so as not to obstruct the introduction and the extraction of paper.

DO NOT EXPOSE THE PRINTER TO ANY HEAT-SOURCE.
PROTECT IT FROM VIBRATIONS AND WATER PROJECTIONS.

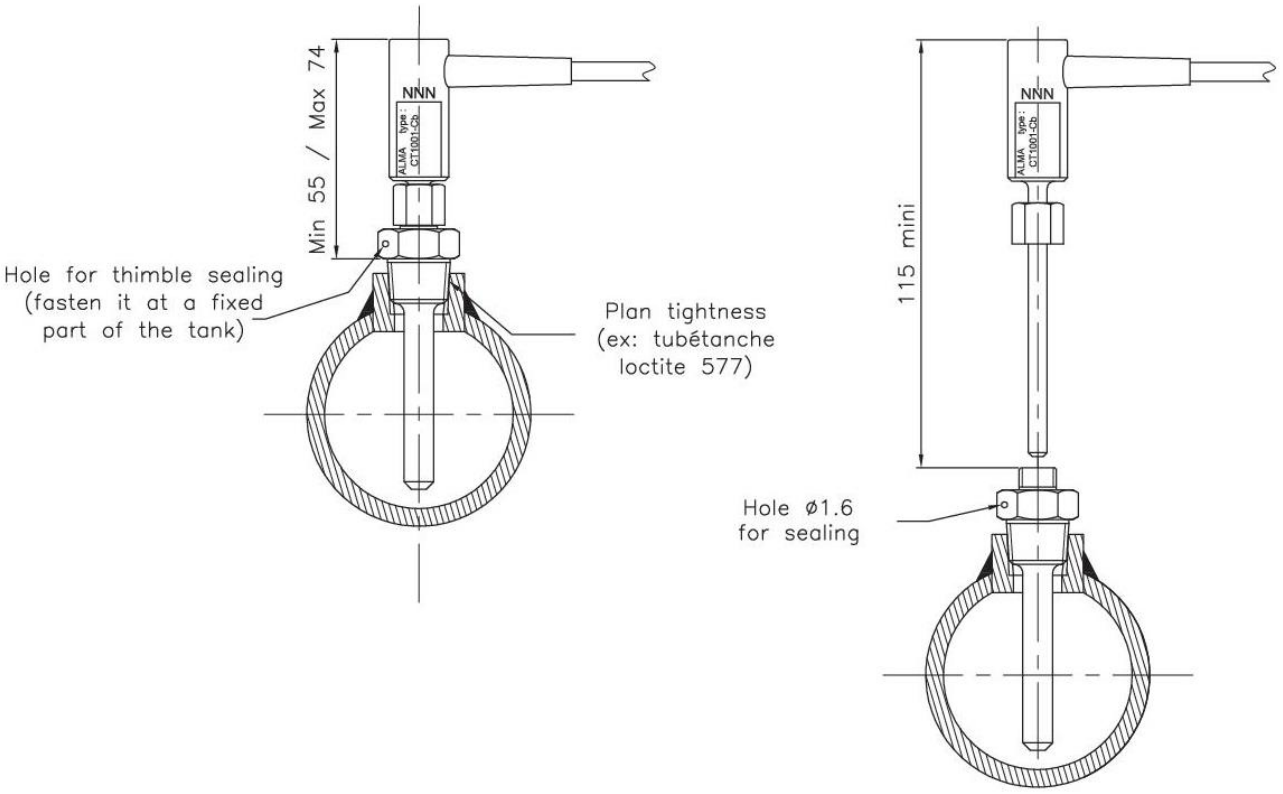
INSTALLATION RECOMMENDATIONS TEMPERATURE SENSOR



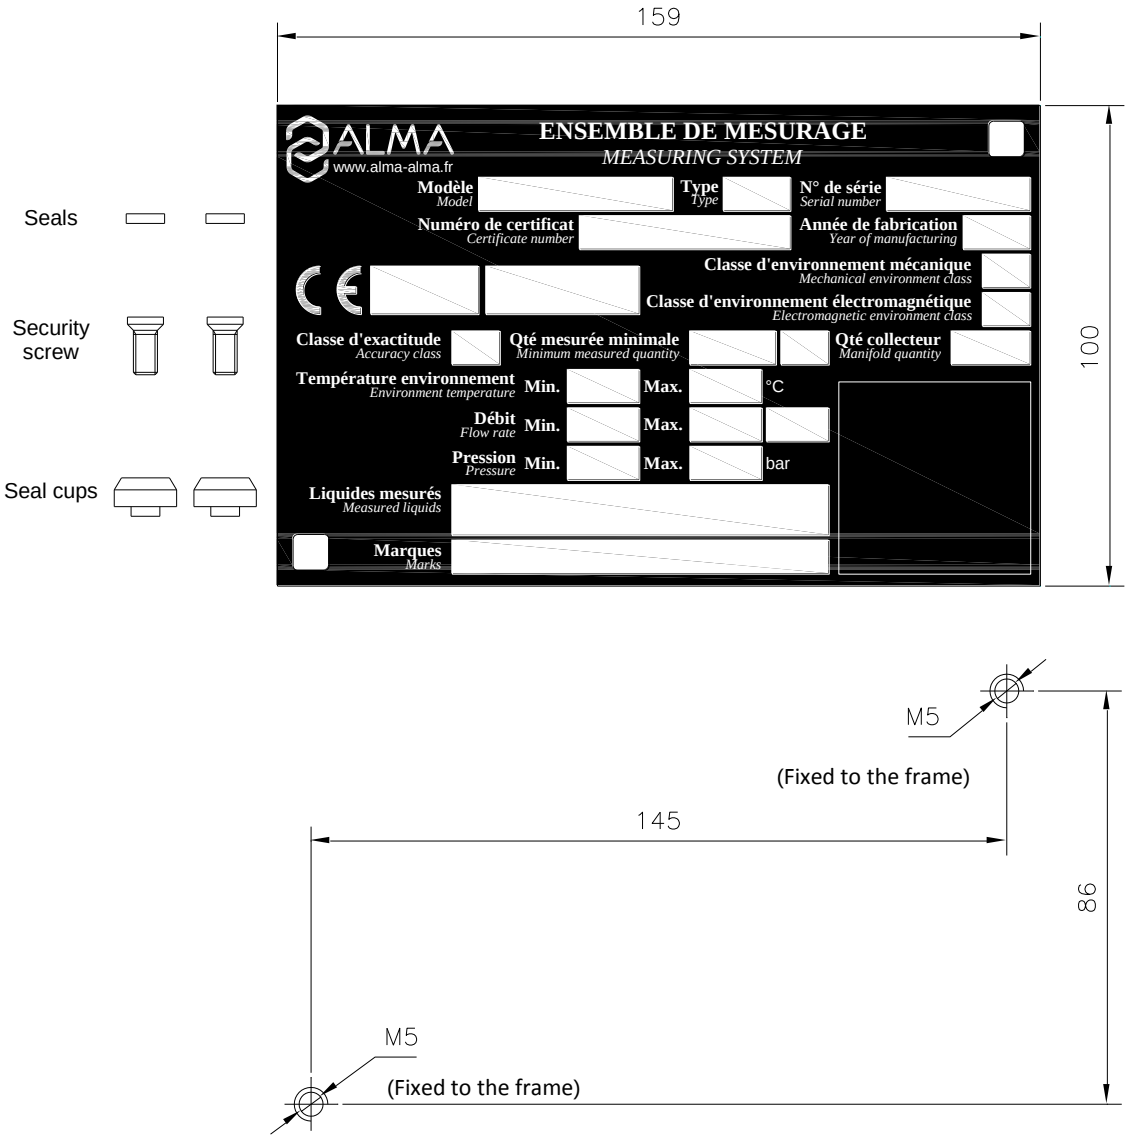
Thermowell thread: 3/8″ NPT

REFER TO INSTRUCTION MANUAL
(DELIVERED WITH THE EQUIPMENT AND AVAILABLE ON ALMA WEBSITE)

INSTALLATION OF THE TEMPERATURE SENSOR ON THE ALMA TURBINE METER:

17. KIT FOR MEASURING SYSTEM IDENTIFICATION PLATE

The identification plate shall be clearly installed, near the associated indicator device, and of easy access in order to be able to read features and to stamp the regulatory marks



The security screws of the cups (provided by ALMA) must be screwed in the tap of the frame (do not use removable nuts).
