A	11/09/2017	Creation *[PJV126]*	DSM	PJ

CONTENTS

1. GENERAL RECOMMENDATIONS

IN ORDER TO AVOID ALL THE PROBLEMS CONCERNING THE INSTALLATION, THE OPERATION AND THE MAINTENANCE OF THE EQUIPMENTS, BEING ABLE TO CREATE INOPPORTUNE FAILURE,
PLEASE RESPECT THE FOLLOWING RECOMMENDATIONS.

BEFORE ANY WORK, MAKE SURE THAT THE EQUIPMENTS ARE NOT POWERED.

1.1. MECANICAL RECOMMENDATIONS

⇨ Respect the recommendations of the instruction manual specifying the installation, operation and maintenance conditions of the ATEX equipment (instruction manual supplied with the equipment).

⇨ Take care to place the equipment in order to facilitate their installation, operation and maintenance by the technicians (working ergonomics).

⇨ Take care to position properly the equipment. The display must be readable without any difficulty.

⇨ Apply a tightening torque suitable with size and material of the fixation element except particular specifications mentioned on the presentation drawing or in the installation guides.

⇨ Mechanically protect the cables with the corrugated conduit if the cables are not ADR (corrugated conduit adapted to vehicles used for "carriage of dangerous goods of road" - hydrocarbons, LPG … - and meet the requirements of French standard NF R13-903. Refer to the regulations in force).

⇨ Ensure there are a good mechanical strength and a good sealing between cable glands and cables, and between cable glands and corrugated conduit.

⇨ Respect cables and corrugated conduit radii of curvature.

⇨ Leave enough flexibility to wires in order to avoid any risk of stripping.

⇨ Allow the drainage of the water in the lower loop (siphon) of the corrugated conduit (not water retention inside the corrugated conduit).

⇨  See § INSTALLATION AND SEALING RECOMMENDATIONS ADRIANE TURBINE METER.

1.2. ELECTRICAL RECOMMENDATIONS

⇨ According to the ATEX directive or any other regulations in force in the country of destination, the safety protection level of the equipment must agree with the installation area (potentially explosive atmospheres).

⇨ Respect the recommendations of the instruction manual specifying the installation, operation and maintenance conditions of the ATEX equipment (instruction manual supplied with the equipment).

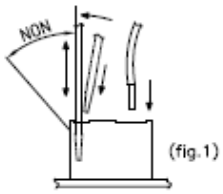
⇨ Connect the supply of the equipment downstream cut-out, on the power supply reserved to the measured distribution.

⇨ Put a delayed protection of 5A upstream the 24VDC supply to protect equipment in case of reverse polarity or overcurrent.

⇨ Use ADR specific cable, if it is not the case, use at minimum a cable resisting to hydrocarbons. Mechanically protect this cable with a corrugated conduit (corrugated conduit adapted to vehicles used for "carriage of dangerous goods by road" - hydrocarbons, LPG … - and meet the requirements of French standard NF R13-903. Refer to the regulations in force).

⇨ Take care not to damage the terminals of the different electronic boards while wiring.

- Screw terminals: do not damage the screw heads of the terminals.
  - Use insulated lugs and insulated wire ferrules adapted to the section of wires.
- Spring terminals: do not block the springs (if a spring is blocked, the electronic board must be replaced).
  - Use flat screwdriver 0.4x2.5 (see fig.1).
  - Insert the screwdriver slightly tilted, then push it perpendicularly to the terminal.
  - Do not exceed the upright position when the screwdriver is do in order not to block the spring.
  - Insert or remove the wire and remove the screwdriver.



⇨ Pass the power supply cores (24VDC truck) through the ferrites by carrying out a loop (ALMA supply).

⇨ Do not use wires of section higher than 1.5mm².

⇨ Do not insert more than two wires in a terminal, if necessary use an insulated twin wire ferrule (unless otherwise indicated).

⇨ Strictly respect the polarities of the input/output when wiring, in accordance with serigraphy on the cards and/or with the installation guide indications.

⇨ Whenever possible, perform a wired test, after wiring and before powering.

⇨ Whenever possible, respect the locations of the cables specified in the installation guide.

⇨ Equipment must be connected to the frame ground (external ground connection).

⇨ Whenever possible, use shielded cables with a 360° connection through the metal cable glands (see the documentation delivered with the equipment).

Otherwise, connect the shields to devices inside the equipment (ground terminal, earth bar, earth boss…).

⇨ Whenever possible, label the cables and cores according to the installation guide to facilitate the later maintenance operations.

⇨ Respect a homogeneous wire color code.

⇨ Printer TMU295: before positioning the printer on its support, check that configuration switches of the data link protocol, located under the printer, are well positioned: No3 on 'ON' and the 7 others on 'OFF'.

⇨ Current of the electrical devices:

Electrical devices	Supply voltage	Minimum current	Maximum current
MICROCOMPT+	24VDC +/-10%	0.7 A	1.5 A
PRINTER	24VDC +/-10%	0.1 A	5.5 A (switch-on)

⇨ Color code according to DIN 47100.

⇨ Code for designation of colours according to IEC 60757 (except FR codes):

FR				EN	IT	ES	DE
Couleurs	Codes		Standard codes CEI 60757	Colours	Colori	Colores	Farbe
White	**Bc**		**WH**	White	Bianco	Blanco	Weiß
Marron	**Mr**		**BN**	Brown	Marrone	Marrón	Braun
Vert	**Vt**		**GN**	Green	Verde	Verde	Grün
Jaune	**Jn**		**YE**	Yellow	Giallo	Amarillo	Gelb
Gris	**Gr**		**GY**	Grey	Grigio	Gris	Grau
Rose	**Rs**		**PK**	Pink	Rosa	Rosa	Lila
Bleu	**Bl**		**BU**	Blue	Blu	Azul	Blau
Rouge	**Rg**		**RD**	Red	Rosso	Rojo	Rot
Noir	**Nr**		**BK**	Black	Nero	Negro	Schwarz
Violet	**Vi**		**VL**	Violet	Viola	Violeta	Violett
Orange	**Or**		**OG**	Orange	Arancio	Naranja	Orange
Vert/Jaune	**V/J**		**GNYE**	Green/Yellow	Verde/Giallo	Verde/Amarillo	Grün/Gelb

1.3. PNEUMATIC RECOMMENDATIONS

⇨ Air must be filtered – from 40 to 20µm. Specific recommendations may be added in the installation guides or on the presentation drawings.

⇨ The air lubrication must be permanent and correct to avoid any damage on the pneumatic components.

⇨ The air supply pressure to the inlet of the equipment must be at least 6 bar and max 8 bar. Specific recommendations may be added in the installation guides or on the presentation drawings.

⇨ The pneumatic supply pipes (6/4) must be cut straight (no slanting cut) and should not be crushed after cutting to prevent leakage on fittings.

⇨ Respect the radii of curvature of the pneumatic pipes indicated by the manufacturer.

⇨ Use colored pneumatic pipes to ease maintenance operation.

⇨ In no case the exhaust holes of the pneumatic organs should be plugged, obstructed, unless if that is clearly specified in the installation guides or on presentation drawings.

⇨ The use of muffler is not allowed under any circumstances (fouling, frost…). Put a pneumatic pipe of sufficient length, pointed downwards, so that its end is placed in a protected area (L = 100 mm min.).

⇨ Pressure unit conversion:

PRESSURE UNIT CONVERSION				
Units	**Bar**	**PSI**	**Pascal**	**kg/cm²**
1 Bar =	1	14,5	100 000 ($1x10^5$)	1,0197
1 PSI =	0.069	1	6894,5	0,07031
1 Pascal =	$1x10^{-5}$	$14,5x10^{-5}$	1	$1,0197x10^{-5}$
1 kg/cm² =	0,98	14,22	98066,5	1

PSI = Pound per Square Inch (livre par pouce carré)
1 bar = 100 kPa = 0.1 MPa (1 MPa = 10 bar)

2. GENERAL PRESENTATION

2.1. USE ACCORDING TO MID CERTIFICATE

The measuring system TURBOTRONIQUE type MTS-xx or MTP-xx is covered by the EU type examination certificate N° LNE-26664. Refer to this certificate for any precision about its installation.
For the sealing plan, see Annex to EU type examination certificate N° LNE-26664.

2.2. SPECIAL CONDITIONS FOR INSTALLATION

- ⇨ The ALMA model TURBOTRONIQUE measuring systems should be installed on road tankers.
- ⇨ The installation of the measuring system covered by this certificate must be in conformity with the plan which is presented in § “securing and sealing” of the certificate.
- ⇨ If the measuring system is fitted with two delivery points, it needs to be equipped with a device allowing a liquid delivery by only one point at once.
- ⇨ The measuring system can be equipped with an additive injection device. This injection has to occur upstream of the meter. If the additive injection is situated downstream of the gas elimination device, the installation has to avoid air injection by means of positive safety detection device, sealed and placed at the low level of the additive tank, which stops injection in case of additive lack.
- ⇨ The measuring system may be fitted with OPW, ALPECO, or EMCO WHEATON product return devices, as well as with a magnetic valve for venting, associated with the wind concentrator enabling product transfers towards the compartments. This has to be installed so that no air or venting of the wind concentrator may occur during delivery.
- ⇨ If a printing device not covered by an evaluation certificate is connected to the ALMA electronic calculator-indicator, a notice stating that the data printed is not subject to legal control must be clearly printed on the delivery notes.
- ⇨ The special installation conditions of the gas elimination devices FSGB48E, SG 80.1 AL, SG 80 IN PERNIN EQUIPEMENTS and FS24 SATAM are defined in the relevant evaluation certificates.
- ⇨ It is mandatory to install a non-return valve on the pipe between the gas elimination device and the transfer point. The non-return valve may be placed and sealed upstream of the meter or downstream as well.

  Otherwise, if the liquid level in the gas elimination device may be lower than the liquid level in the meter, a non-return valve has to be installed at the device outlet, or placed and sealed between the device and the meter.
- ⇨ The hose allowing gas removal at the outlet of the gas elimination device has to be non-pinchable or keep the deformation mark.
- ⇨ The special installation conditions of the meters are defined in evaluation certificates LNE-12393.

3. PART LIST

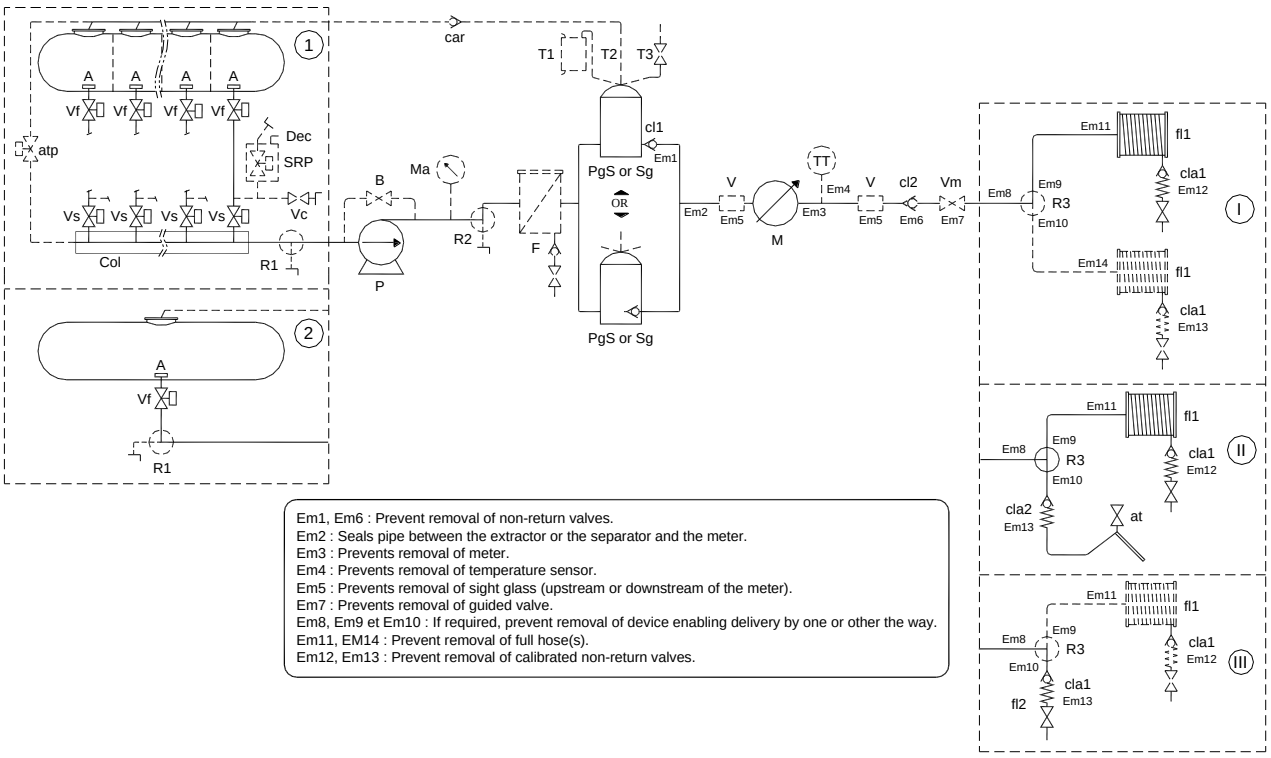
EQUIPMENTS INCLUDED IN THE MEASURING SYSTEM DELIVERED BY ALMA				
Item	**Equipment**	**Designation**	**Qty**	**Option***
1		**CALCULATOR INDICATOR MICROCOMPT+ TURBOTRONIQUE WITH Bluetooth CONNECTION** NON ATEX or ATEX version	1	
		Wi-Fi CONNECTION (As an alternative to Bluetooth)		•
		**RFID SUPERVISOR KEY**		
2	2a 	**ADRIANE TURBINE METER DN50-50 or DN80-80** (Depending on configuration)	1	
	2b 	**ADRIANE TURBINE METER DN80-80 373 PN16 Ad blue®** (Only for TURBOTRONIQUE Adblue®)		
3		**CONNECTION KIT ADRIANE DN50 OR DN80** (Depending on configuration) (Supplied with pre-drilled screws for sealing)	1	•
4		**PRINTER TMU-295** (Printer – power supply cable – serial link cable 10m)	1	
5		**CONVERTER 24VDC/24VDC 2.1A 50W** (Printer power supply 24VDC) (Supplied by Alma or Customer)	1	•

Non-contractual pictures

EQUIPMENTS INCLUDED IN THE MEASURING SYSTEM DELIVERED BY ALMA				
Item	**Equipment**	**Designation**	**Qty**	**Option***
6		**NON-RETURN VALVE KIT DN50 OR DN80** (Depending on configuration)	**1**	●
7		**SIGHTGLASS KIT DN50 OR DN80** (Depending on configuration) (Supplied with pre-drilled screws for sealing)	**1**	●
8		**Pt100 TEMPERATURE PROBE – CT1001-Pe ATEX** (Supplied with thermowell)	**1**	●
9		**2-ANTENNA BOX GSM AND GPS**	**1**	●
10		**KIT FOR MEASURING SYSTEM IDENTIFICATION PLATE** (Plate and sealing device)	**1**	●
Option*: equipment sold as an option by ALMA. It must be installed on the measuring system if required by the certificate.				

Non-contractual pictures

4. OVERALL DRAWING OF THE TURBOTRONIQUE MEASURING SYSTEM



Em1, Em6 : Prevent removal of non-return valves.
Em2 : Seals pipe between the extractor or the separator and the meter.
Em3 : Prevents removal of meter.
Em4 : Prevents removal of temperature sensor.
Em5 : Prevents removal of sight glass (upstream or downstream of the meter).
Em7 : Prevents removal of guided valve.
Em8, Em9 et Em10 : If required, prevent removal of device enabling delivery by one or other the way.
Em11, EM14 : Prevent removal of full hose(s).
Em12, Em13 : Prevent removal of calibrated non-return valves.

A: Anti-swirl device.
R1: Two-way cock enabling delivery per meter, draining and filling of the tank without using the meter (optional).
P: The pump may be reversible. In that case, a non-return valve has to be added between cock R2 and gas separator Sg.
B: Pump bypass
Ma: Manometer indicating the forcing back pressure of the pump (optional).
R2: Two-way cock for pumped delivery without meter (optional).
F: Filter which, when external to the separator or the extractor, may be fitted with a draining cock.
Sg: Gas separator
PgS: Specific gas extractor.
cl1: Non-return valve (compulsory when the gas elimination device is not fitted with internal non-return valve).

T1, T2, T3: Variants authorized for gas evacuation device:
T1: Use of a container to retrieve the liquid particles carried along by gas,
T2: Foam going back to the tank,
T3: Use of a valve for draining.

car: Non-return valve on foam return (optional).
M: Meter
V: Sight glass (compulsory with a specific gas extractor (gas indicator), optional with a gas separator).
cl2: Non-return valve (optional).
TT: Temperature sensor Pt100 (optional).
Vm: Guided valve (optional).
R3: Device enabling, when the measuring system has two delivery paths, to make deliveries one or the other way.
fl1: Full hose on hose reel
fl2: Very short full hose enabling delivery with flowrate (optional).
cla1: Calibrated non-return valve preventing draining of the full hose.
cla2: Calibrated non-return valve preventing draining of the empty hose.

I, II, III: Variant of the delivery device:
Variant I: One or two full hoses with reel,
Variant II: Combination of full hose on reel and empty hose,
Variant III: Combination of short full hose and full hose on reel, if applicable.

Vf: Valve for compartment bottom.
Col: Wind concentrator.
atp: Guided venting (optional).
Vs: Selection valve, installed on pipe of each compartment, enabling communication with wind concentrator (guided or manual).
Vc: Valve for source loading, installed on pipe of each compartment (optional).
SRP: Return Product System on one or more compartment(s) (optional).
Déc. : Decompression control (secured).

1, 2: Variants of devices associated with the tank
Variant 1: Tank with several compartments and wind concentrator,
Variant 2: Single compartment tank.

5. MICROCOMPT+ TURBOTRONIQUE NON ATEX OR ATEX

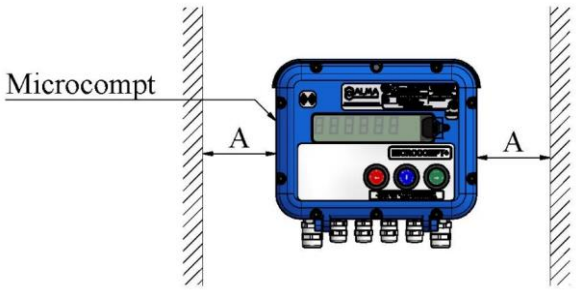
5.1. CALCULATOR-INDICATOR MICROCOMPT+ NON ATEX

5.2. CALCULATOR-INDICATOR MICROCOMPT+ ATEX

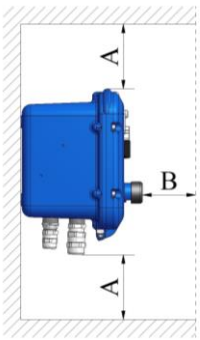
Document available on website alma-alma.fr

5.3. INSTALLATION RECOMMENDATIONS REMOTE CALCULATOR-INDICATOR MICROCOMPT+

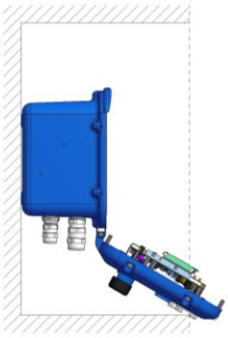
- Fasten the box with 4 M6 screws (holder suitable for vibrations and designed to support the MICROCOMPT). On the box: 4 M6 blind holes tapped length=12 over 185x132).
- Leave an open space around the box in order:
  - To facilitate maintenance operation.
  - To prevent any pressing on pushbuttons and on the glass.
- The space between the front face of the box and the cabinet door shall be sufficient.
- Dimensions: A > 100mm and B > 60mm



- SOLUTION 1: straight box if it's a breast height.

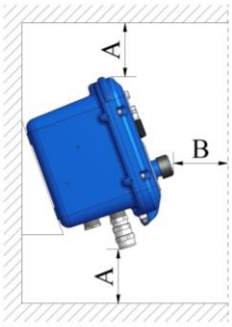


Left hand view
Closed box



Left hand view
open box

- SOLUTION 2: 20° angle if it's not at breast height.

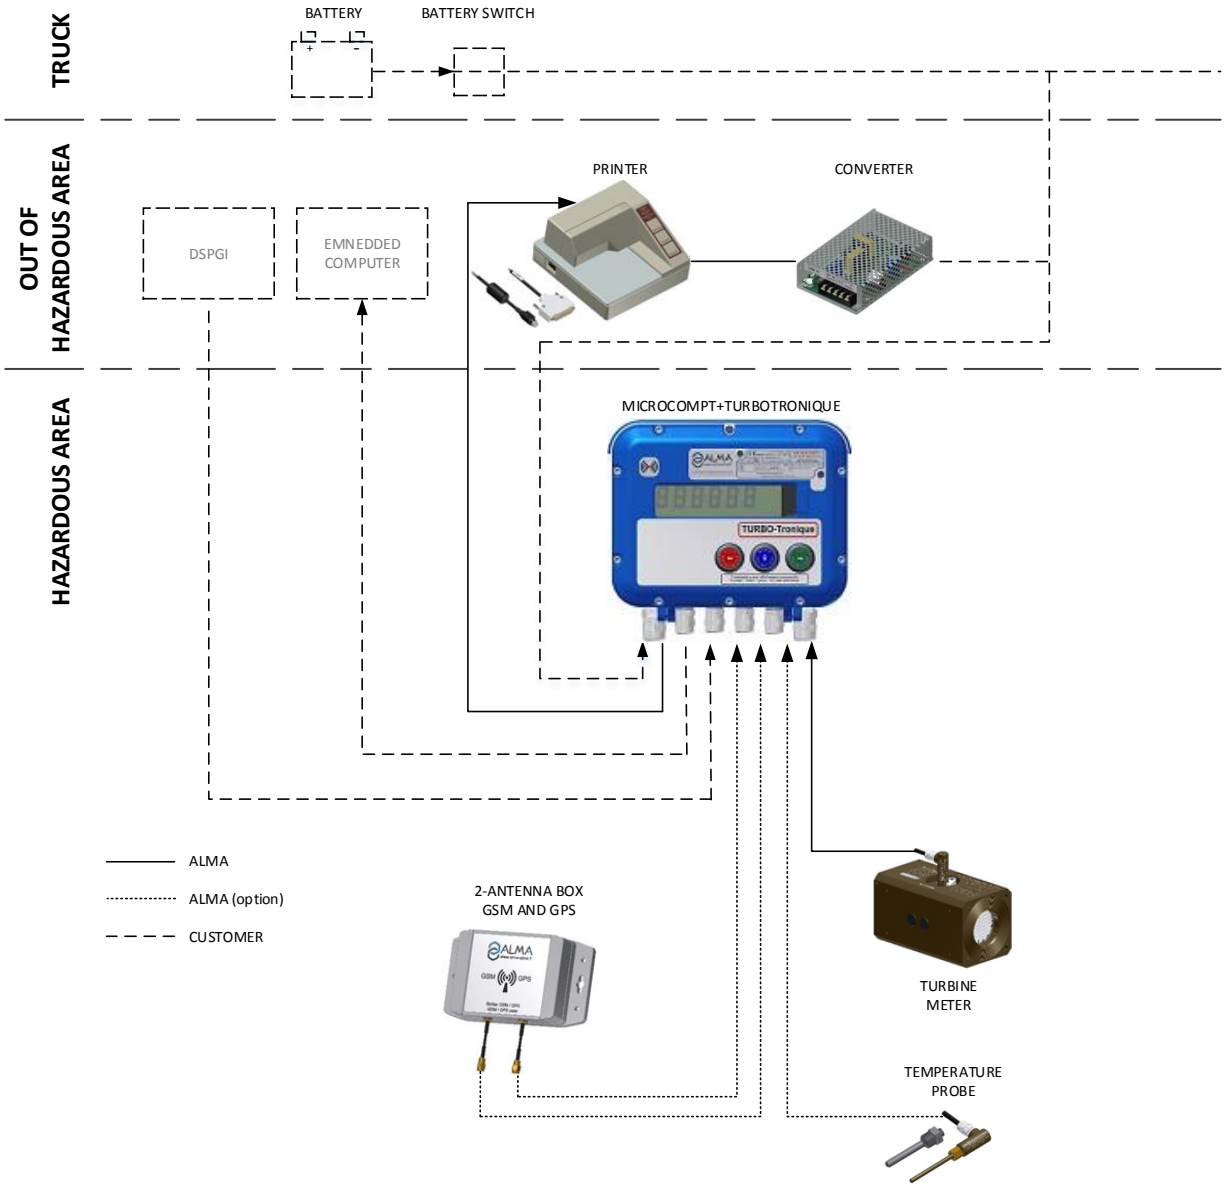


Left hand view
Closed box

Left hand view
open box

REFER TO THE INSTRUCTION MANUAL
(DELIVERED WITH THE EQUIPMENT OR AVAILABLE ON ALMA WEBSITE)

5.4. ELECTRICAL WIRING CALCULATOR-INDICATOR MICROCOMPT+



Terminal assignment of the power supply board

Any mass braids and shielding must be connected to the MICROCOMPT+ ground bar

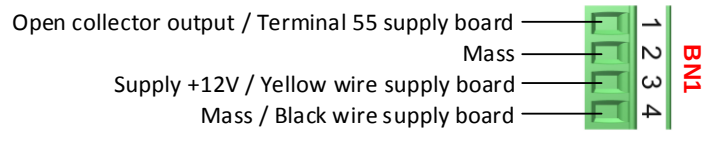
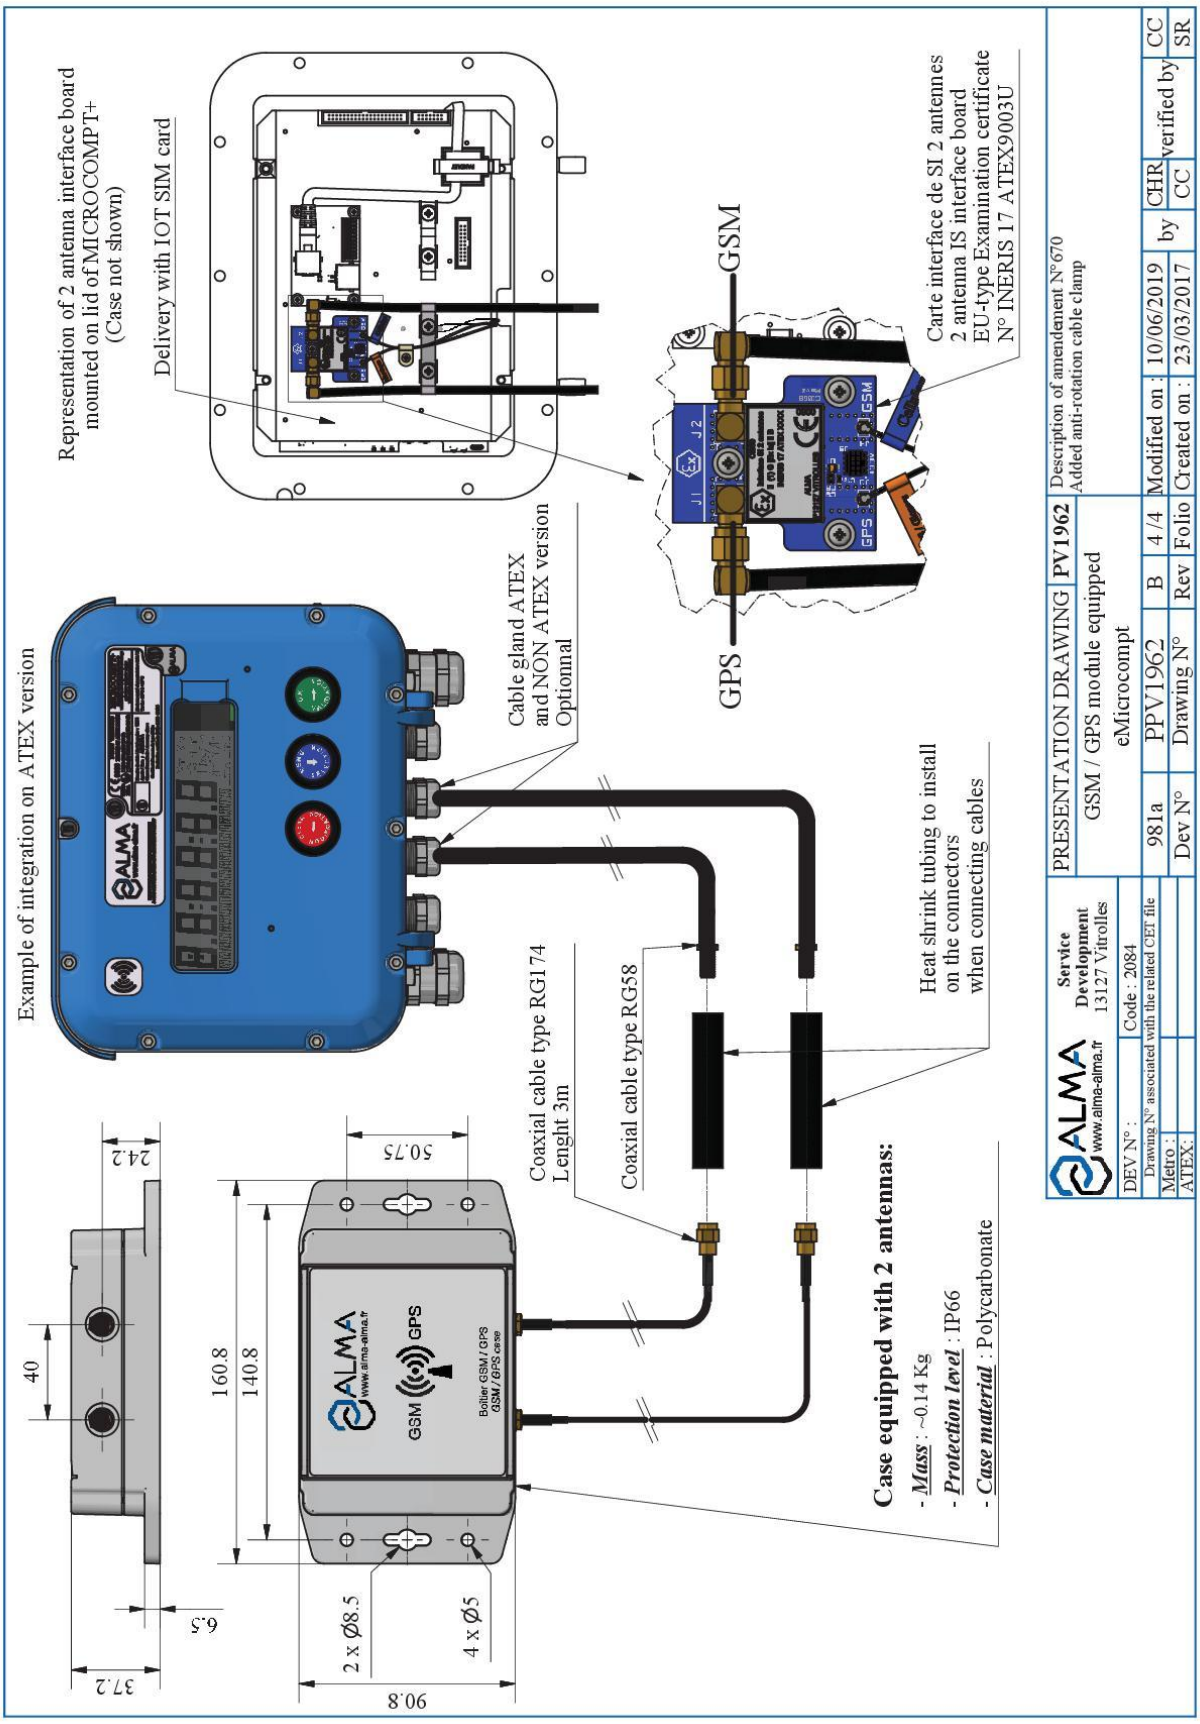
- This extension board only works with two-wire optic overfill prevention probes.
- A Dummy device is a two-wire dry probe simulator. Channels that are not connected to overfill prevention probes must be connected to a Dummy device. None of the 8 channels must be open.
- Do not install the Dummy into the MICROCOMPT housing.
- If the MICROCOMPT is off, the probes and the Dummy device shall be electrically isolated.

Connection of the BN1-terminal to the MICROCOMPT+ power supply board (non-IS area):

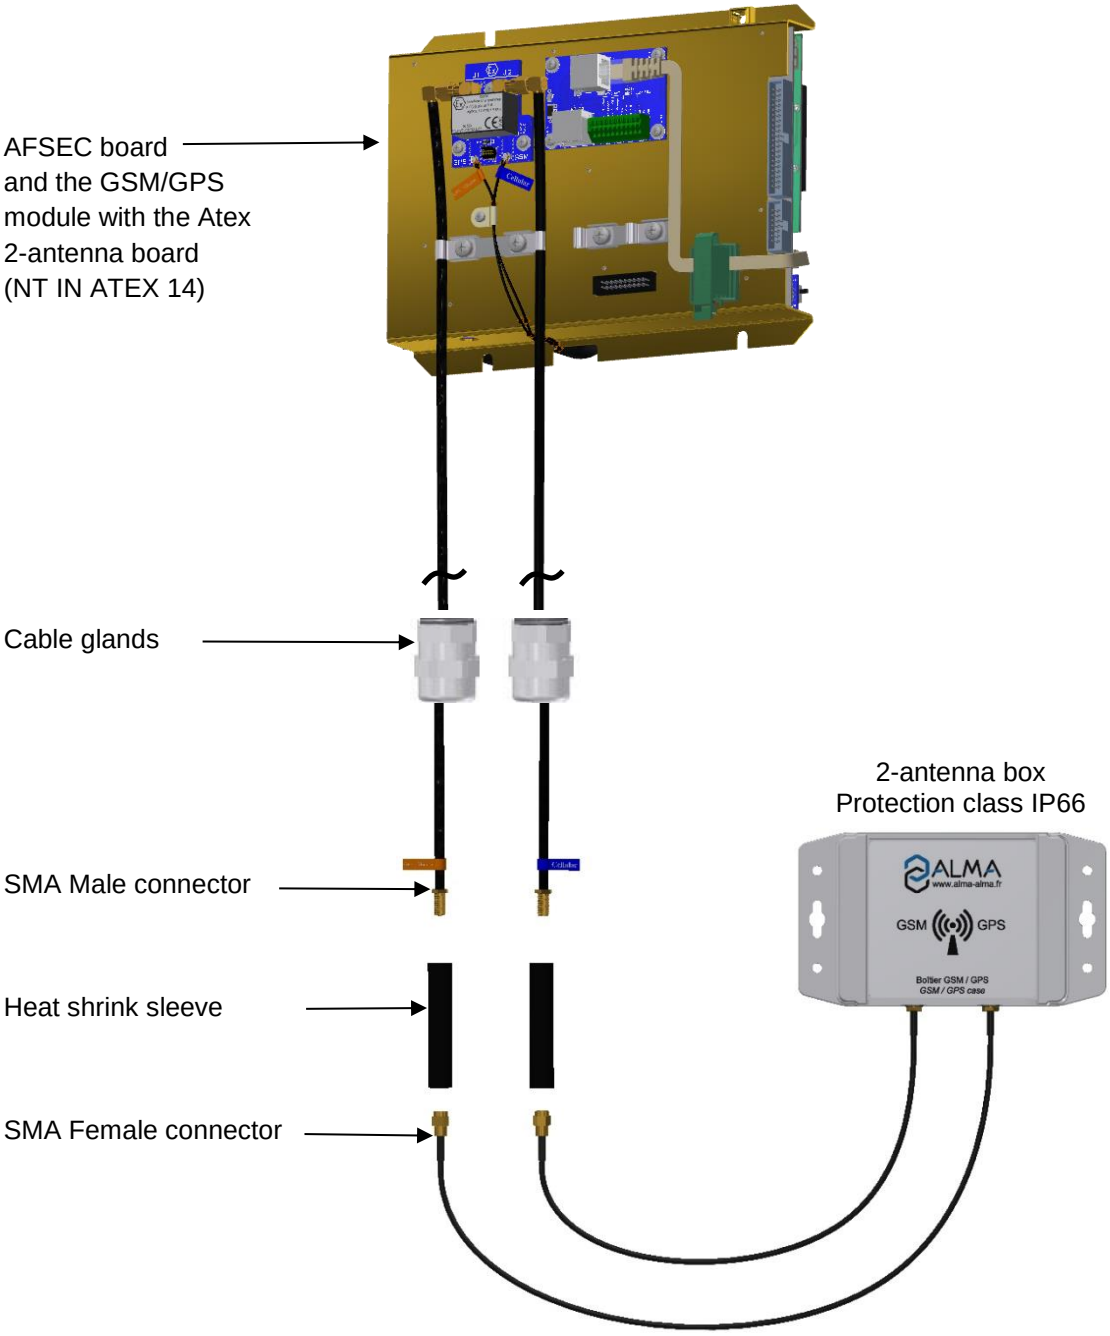


5.5. GSM/GPS MODULE EQUIPPED – 2-ANTENNA BOX

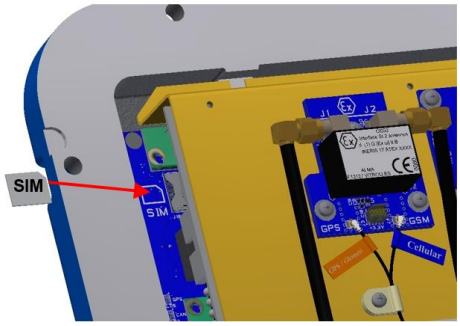


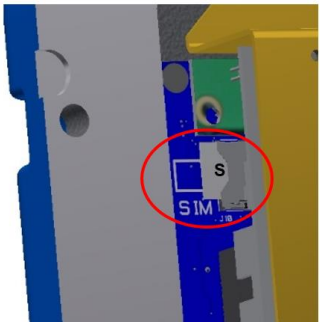
Document available on website alma-alma.fr

Mounting and wiring of the GSM and GPS antennas



The 2-antenna board is supplied with a micro-SD card mounted as follows:





Mounting of the GSM/GPS cables into the cable glands

ALMA connects the GSM and GPS antenna to the MICROCOMPT+ (2-antenna board).

At the outlet of the MICROCOMPT+ box, you must pass both cables through cable glands. In case of an ATEX MICROCOMPT+, cable glands must be ATEX.

Into the MICROCOMPT+, adjust the cable length to easily open and close the cover.

Tighten both cable glands.

Wiring of the 2-antenna box to the MICROCOMPT+

Fasten the box. You must install it in an area free of metallic cover to have a good reception and broadcasting of signal. You can install the box in a horizontal or vertical position.

Put each coaxial cable through the heat shrink sleeve.

Plug the RG58(1) cable from the MICROCOMPT+ with the RG174(2) cable from the antenna box and tighten them. Isolate the male/female SMA connectors with the supplied heat shrink sleeve (both antennas in the box are the same, cables don't have to be labelled).

Position and heat up the sleeve on the connectors to prevent corrosion and humidity.

WARNING: The cables of this box can be **neither shortened nor extended**

(1) RG58: Semi-rigid coaxial cable, 5mm diameter

(2) RG174: Flexible coaxial cable, 2.7mm diameter

5.6. ELECTRICAL WIRING SPOOL VALVE CONTROL

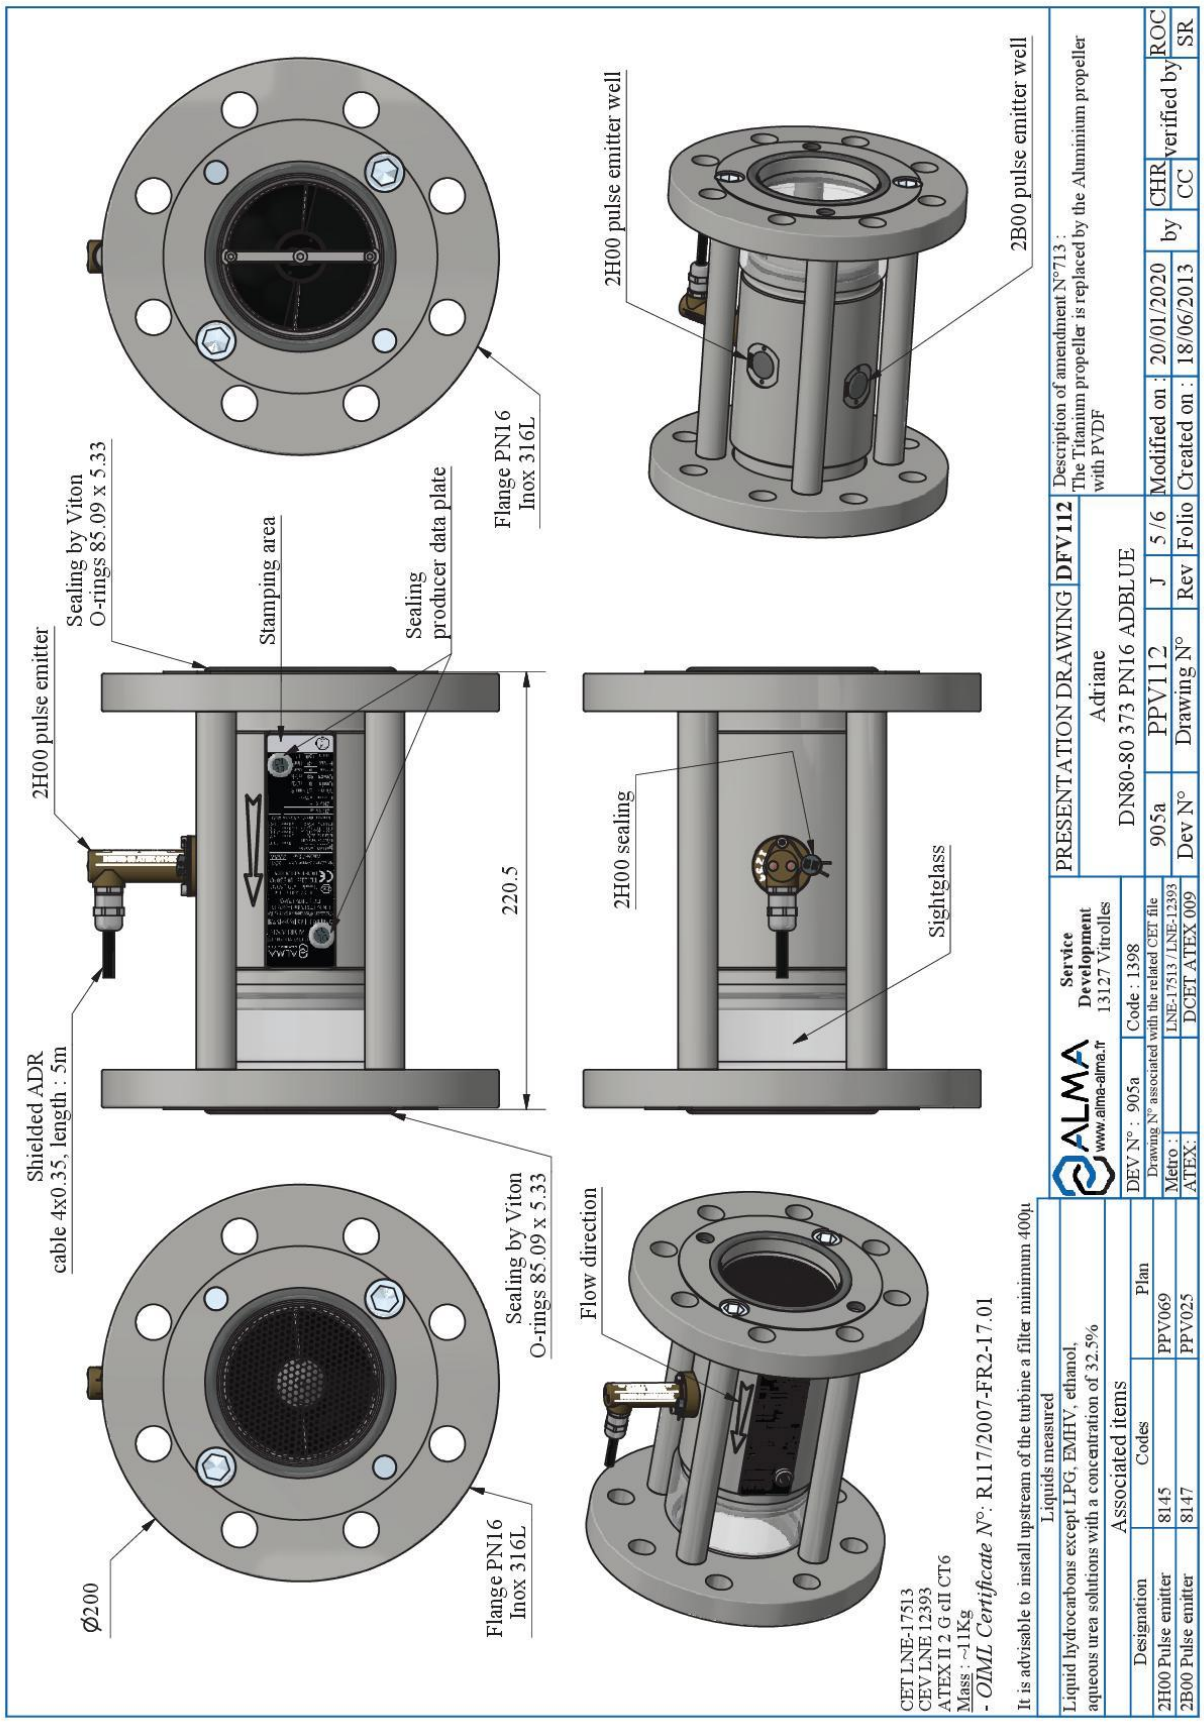
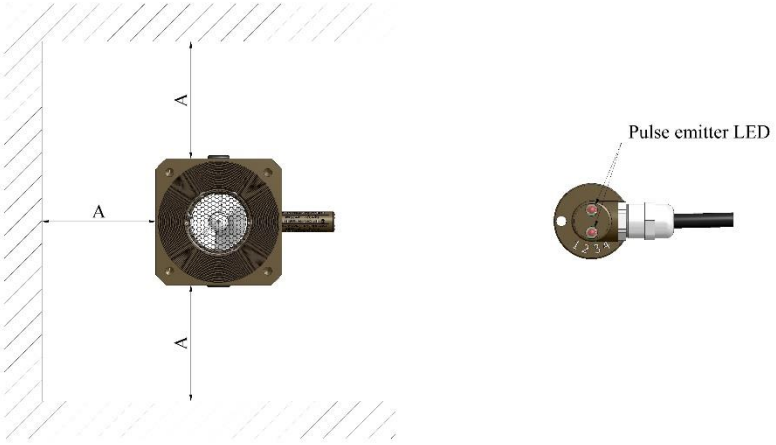
6.3. ADRIANE TURBINE METER DN80-80 373 PN16 Ad blue®



Document available on website alma-alma.fr

6.4. INSTALLATION AND SEALING RECOMMENDATIONS ADRIANE TURBINE METER

- The identification plate and the led of the pulse emitter(s) shall be visible and accessible.
- The turbine must be installed with respect to the flow direction.
- Put sealing rings each other sides between the turbine and the backflanges.
- Leave an open space all around the turbine in order to ease maintenance.
- Install a 400µ filter (mini) on the pipe upstream from the turbine meter.
- After installation or during the commissioning period, if the new or modified pipes have not been perfectly cleaned or pickled and passivated, the turbine should be protected by a honeycomb sieve – max. 1mm mesh. It must be placed between two flanges upstream from the turbine.
- Dimensions: A > 100mm.



- Refer to the certificate written on the identification plate of the measuring system to suit the sealing requirements
- No loose lead wire on the sealing devices

For accuracy class 0.5 and 1.0 measuring systems, the pipes and equipment upstream or downstream the turbine meter must have the same nominal diameter as the meter on a length at least equal to 10 times this diameter upstream and 5 times this diameter downstream.

These lengths can be straight or bent.

It is mandatory that no flowrate adjustment device (e.g. a variable-opening valve) is located upstream at a distance less than 10 times the nominal diameter of the meter. Do not create derivation circuits with sample or bypass, specially make sure that no nozzle is present on this pipe.

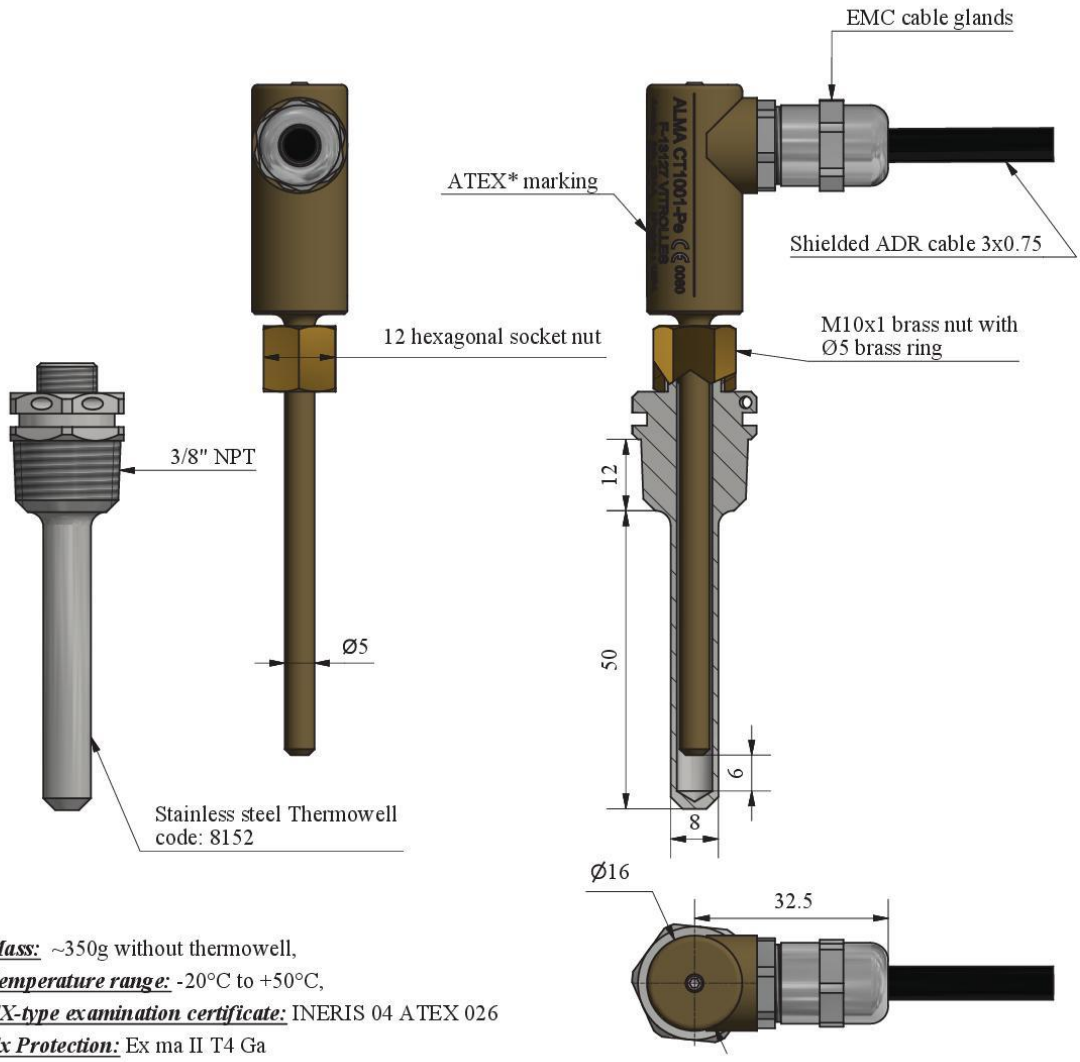
12. TEMPERATURE PROBE Pt100 – CT1001 ATEX



- ***Mass:*** ~350g without thermowell,
- ***Temperature range:*** -20°C to +50°C,
- ***EX-type examination certificate:*** INERIS 04 ATEX 026
- ***Ex Protection:*** Ex ma II T4 Ga

The sensor body is made of bronze color anodized aluminum alloy;
The ring and the nut are made of brass.
The probe can be be mounted either on a ALMA thermowell or on a thimble connection 1/4 "BSP (M10x1 n5).
Before installation, lubricate the parts in contact with the thermowell or the boss, to prevent corrosion

PT100 features:

- 3 wires
- 1/3 DIN

*ATEX "ma" certification.
For installation and use in hazardous areas see Instruction manual

Also available with output connector according to IEC 60947-5-2
